Voluntary Protection Program

Policy and Procedures Manual
Executive Summary

This Instruction cancels and replaces the Voluntary Protection Program (VPP), Policy and Procedures Manual Revision, Sep 2012 and this document constitutes Nevada Division of Industrial Relations policies and procedures manual for use by the Safety Consultation and Training Section in administering the Voluntary Protection Program within the State of Nevada.

The State of Nevada, under an agreement with Federal OSHA, operates an occupational safety and health program in accordance with Section 18 of the Occupational Safety and Health Act of 1970. Initial approval of the Nevada State Plan was published on January 4, 1974, and Final approval was published on April 18, 2000.

The Nevada State Plan applies to all public and private sector employers in the State, with some exceptions, including, but not limited to Federal employees, the United States Postal Service (USPS), private sector maritime, employment on Indian lands, and areas of exclusive Federal jurisdiction. See NRS 618.315; 29 CFR 1952.295.

The Administrator of the Division of Industrial Relations (the Administrator) is charged with enforcing the Nevada Occupational Safety and Health Act (the Act), NRS 618.005 et seq. He is also the Nevada State Plan designee.

Under the Act, the Division of Industrial Relations is administered by the Department of Business and Industry and a decision on any question under the Act must be a decision of the Administrator, subject to review by the Department. Thus, either the Administrator of the Division of Industrial Relations or the Director of the Department of Business and Industry may, as they deem appropriate, participate in any activity authorized by the Act or set forth in this Policy and Procedures Manual.
Disclaimer

This manual is intended to provide instruction regarding some of the internal operations of the Safety Consultation and Training Section (SCATS), and is solely for the benefit of the State of Nevada Government. No duties, rights, or benefits, substantive or procedural, are created or implied by this manual. The contents of this manual are not enforceable by any person or entity against the Division of Industrial Relations or the State of Nevada.

Chapter 1
Introduction

I. PURPOSE - This policy clarifies the overall policy for administering the State of Nevada Voluntary Protection Program (NV-VPP).

II. SCOPE - This instruction applies statewide.

IV. DEFINITIONS

- **1-Year Conditional Goal** - A target for correcting deficiencies in safety and health management system elements or sub-elements identified by the NV-VPP onsite evaluation team during the onsite evaluation of a Star participant. Such deficiencies, which indicate that a site no longer fully meets Star requirements, must be corrected within 90 days, and the participant must then operate at the Star level for 1 year for the participant’s conditional status to be lifted. Failure to meet this requirement will result in termination from NV-VPP.

- **90-Day Items** - Compliance-related issues that must be corrected within a maximum of 90 days, with effective protection provided to employees in the interim.

- **Annual Evaluation** - A participant’s yearly self-assessment to gauge the effectiveness of all required NV-VPP elements and any other elements of the participant’s safety and health management system.

- **Annual Submission** - A document written by a participant and submitted to NV-VPP by February 15th each year, consisting of the following information: Updated names and addresses; the participant’s and applicable contractors’ injury and illness case numbers and rates, average annual employment and hours worked for the previous calendar year; a copy of the most recent annual evaluation of the participant’s safety and health management system; descriptions of significant changes or events; progress made on the previous year’s recommendations; 1-Year Conditional goals (if applicable); and any success stories. [See Appendix C for the Annual Submission Format] Additionally, participants covered by the Process Safety Management Standard (PSM) will be required to respond to applicable questions from the annual NV-VPP PSM questionnaire.

- **Applicable Contractor** - A contractor whose employees worked at least 1,000 hours for a NV-VPP participant in any calendar quarter within the last 12 months and are not directly supervised by the applicant/participant.

- **Accepted Application** - An application that has been reviewed by the NV-VPP Office and found to be complete. Also referred to as a completed application.
- **Backup Team Leader** - A member of the NV-VPP onsite evaluation team who provides assistance to the Team Leader and can assume his/her duties when necessary.

- **CAO** – Chief Administrative Officer of the Nevada Department of Business and Industry, Division of Industrial Relations, Safety Consultation and Training Section (SCATS).

- **Safety Consultant** - A State safety and health consultant.

- **Contract Employees** - Those individuals who are employed by a company that provides services under contract to the NV-VPP applicant or participant, usually at the NV-VPP applicant’s or participant’s worksite.

- **Days Away, Restricted, and/or Transfer Case Incidence Rate (DART rate)** - The rate of all injuries and illnesses resulting in days away from work, restricted work activity, and/or job transfer. This rate is calculated for a worksite for a specified period of time (usually 1 to 3 years). [See Appendix A.]

- **Federal Register** - The official Federal government publication, published by the Government Printing Office (GPO), in which OSHA announces the philosophy and criteria for the Federal VPP approval and participation in a public notice commonly referred to as the “VPP Federal Register Notice.”

- **General Contractor**. A construction site owner or site manager who controls construction operations and has contract responsibility for assuring safe and healthful working conditions at a worksite.

- **Injury/Illness Rates** - Numerical rates that represent recordable injuries and illnesses at a worksite that are an important factor when NV-VPP assesses an applicant/participant’s qualification for NV-VPP.

- **Mentoring** - The assistance that a NV-VPP participant provides to another worksite to improve that location’s safety and health management system and/or prepare it for NV-VPP application or participation.

- **Merit Goal**. A target for improving one or more deficient safety and health management system elements for a participant approved to the Merit program. A Merit goal must be met in order for a participant to achieve Star status.

- **Merit Program**. The program within VPP designed for worksites that have demonstrated the potential and commitment to achieve Star quality, but that need to further improve their safety and health management system. OSHA gives a Merit Program participant specified Merit goals that it must meet in order to achieve Star status and continue within VPP.

- **Onsite Assistance Visit** - A visit to an applicant or participant site by a Consultant, Industrial Hygienist, or other non-enforcement personnel, to offer assistance to the applicant including help with their application, conduct a records review, and/or make general observations about the applicant’s safety and health management system. This can be accomplished through a limited or full service consultation visit.
- **Onsite Evaluation** - A visit to an applicant or participant site by a NV-VPP onsite evaluation team to determine whether the applicant/participant qualifies to participate, continue participation, or advance within the NV-VPP.

- **Onsite Evaluation Report** - A document written by the NV-VPP onsite evaluation team, consisting of the site report and site worksheet [see Appendix D]. This document contains the team’s assessment of an applicant/participant’s safety and health management system and the team’s recommendation regarding approval of the applicant or reapproval of the participant in NV-VPP.

- **Onsite Evaluation Team** - An interdisciplinary group of NV-VPP professionals and sometimes other government employees who conduct onsite evaluations. The team normally consists of a team leader, a backup team leader, safety and health specialists, and other specialists as appropriate.

- **Process Hazard Analysis (PHA)** - For the purposes of this document, a PHA is an organized and systemic effort to identify and analyze the significance of potential hazards associated with the processing or handling of highly hazardous chemicals.

- **Process Safety Management (PSM)** - A reference to OSHA standard 29 CFR 1910.119 and 1926.64, which covers all employers who either use or produce highly hazardous chemicals exceeding specified limits.

- **PSM Application Supplement** - A series of questions designed to establish a basic understanding of a NV-VPP applicant’s PSM policies and procedures. Applicants covered by the PSM Standard must submit responses to the PSM application supplement along with their NV-VPP application.

- **PSM “Level 1” Auditor** - A PSM “Level 1” Auditor is a NV-VPP onsite evaluation team member with experience in the chemical processing or refining industries.
  
  o Specific requirements for a PSM “Level 1” Auditor include:
    
    - The OSHA Training Institute’s (OTI) Courses 3300, Safety and Health in the Chemical Processing Industries, and 3400, Hazard Analysis in the Chemical Processing Industries.
    
    - Advanced training such as OTI Course 3410, Advanced Process Safety Management, or other equivalent specialized seminars in PSM.
    
    - Prior experience with chemical industry safety. This experience should include experience obtained in any one of the following ways:
      - Through accident investigations in chemical, petrochemical or refinery plants involving fires, explosions and/or toxic chemical releases;
      - Through previous chemical inspections involving process safety management evaluations; or
      - Through previous chemical industry employment.
    
    o Special Government Employees may alternatively serve in the capacity of a PSM “Level 1” Auditor upon demonstrating training and experience equivalent to the above requirements.
• **PSM Questionnaire** - A document compiled annually using selected questions from OSHA’s Dynamic Inspection Priority Lists. The PSM Questionnaire is a supplemental document required from participants covered under the PSM standard as part of their Annual Submission.

• **Recommendations** - Suggested improvements noted by the onsite evaluation team that are not requirements for NV-VPP participation, but that would enhance the effectiveness of the participant’s safety and health management system. (Compliance with NVOSHA and OSHA standards is a requirement, not a recommendation.)

• **Resident Contractor** - A company that provides ongoing, onsite services to a NV-VPP applicant/participant.

• **Safety and Health Management System** - For the purposes of NV-VPP, a method of preventing employee fatalities, injuries and illnesses through the ongoing planning, implementation, integration, and control of four interdependent elements, but not limited to: Management Leadership and Employee Involvement; Worksite Analysis; Hazard Prevention and Control; and Safety and Health Training.

• **Small Business** - A company having no more than 250 employees at any one facility, and no more than 500 employees statewide.

• **Special Government Employee (SGE)** - An employee volunteer from a participant or corporation, knowledgeable in safety and health management system assessment, formally trained by OSHA in the policies and procedures of VPP, and determined by NV-VPP to be qualified to perform NV-VPP onsite evaluations, who participates as a team member on NV-VPP onsite evaluations.

• **Star Demonstration Program.** The program with VPP that enables companies and/or worksites with Star quality safety and health protection to test alternatives to current Star eligibility and performance requirements. If a Star Demonstration Program is judged successful, its alternative ways to achieve safety and health excellence may lead to changes in VPP criteria. NOT SURE WE WANT THIS

• **Star Program** - The program within NV-VPP designed for participants whose safety and health management systems operate in a highly effective, self-sufficient manner and meet all NV-VPP requirements.

• **Team Leader** - The person who coordinates the NV-VPP onsite evaluation team and ensures that all evaluation activities are performed.

• **Temporary Employees** - Employees hired on a non-permanent basis by the applicant/participant.

• **Termination** - Formal removal by SCATS of a NV-VPP participant from the program.

• **Total Case Incidence Rate (TCIR)** - A number that represents the total recordable injuries and illnesses per 100 full-time employees, calculated for a worksite for a specified period of time (usually 1 to 3 years). [See Appendix A.]

• **NV-VPP Approval Ceremony** - An event planned by the approved worksite and normally held at the site, where a representative from NV-VPP recognizes the
participant’s achievement, presents the NV-VPP plaque, and presents the NV-VPP flag.

- **VPP Manager.** The person directly responsible for the day-to-day operations of the NV-VPP in the state.

- **NV-VPP Participant Representative** - The person designated by an applicant or participant as the primary contact regarding NV-VPP activity at the worksite.

- **Withdrawal** - Decision by the applicant or participant to discontinue pursuing or participating in the NV-VPP.

- **Worksite** - For NV-VPP purposes, a worksite is a location where work is performed by employees of an employer.

V. **BACKGROUND** - The Occupational Safety and Health Administration (OSHA) on July 2, 1982, announced establishment of the Voluntary Protection Programs (VPP) to recognize and promote effective worksite-based safety and health management systems. In the NV-VPP, management, labor, and NV-VPP establish cooperative relationships at workplaces that are implementing or have implemented comprehensive safety and health management systems. Approval into NV-VPP is NVOSHA’s official recognition of the outstanding efforts of employers and employees who have created exemplary worksite safety and health management systems. NV-VPP offers assistance to sites committed to achieving the NV-VPP level of excellence.

VI. **NV-VPP PRINCIPLES** - The following principles are embodied in the Voluntary Protection Program:

A. **VOLUNTARISM** - Participation in NV-VPP is strictly voluntary. The applicant who wishes to participate freely submits information to NV-VPP on its safety and health management system, goes above and beyond compliance with the OSH Act and applicable NV-VPP requirements, and opens itself to agency review.

B. **COOPERATION** - NV-VPP has long recognized that a balanced, multifaceted approach is the best way to accomplish the goals of the OSH Act. NV-VPP’s emphasis on trust and cooperation between NV-VPP, the employer, employees, and employees’ representatives complements the Safety Consultation and Training Sections (SCATS) consultation activity, but does not take its place. NV-VPP staff and NV-VPP participants work together to resolve any safety and health problems that may arise. This partnership enables the NVOSHA to remove participants from programmed inspection lists, allowing NVOSHA to focus its inspection resources on establishments in greater need of agency oversight and intervention. However, NVOSHA continue to investigate valid employee safety and health complaints, fatalities, catastrophes, and other significant events at NV-VPP participant sites.

C. **A SYSTEMS APPROACH** - Compliance with the OSH Act and all applicable NVOSHA requirements is only the starting point for NV-VPP participants. NV-VPP participants develop and implement systems to effectively identify, evaluate, prevent, and control occupational hazards so that injuries and illnesses to employees are prevented. Star participants are often on the leading edge of hazard prevention
methods and technology. As a result, NV-VPP worksites serve as models of safety and health excellence, demonstrating the benefits of a systems approach to employee protection.

D. **MODEL WORKSITES FOR SAFETY AND HEALTH** - NV-VPP selects NV-VPP participants based on their written safety and health management system, the effective implementation of this system over time, and their performance in meeting NV-VPP requirements. Not all worksites are appropriate candidates for NV-VPP. At qualifying sites, personnel are involved in the effort to maintain rigorous, detailed attention to safety and health. NV-VPP participants often mentor other worksites interested in improving safety and health, participate in safety and health outreach and training initiatives, and provide NVOSHA with input on proposed policies and standards. They also share best practices and promote excellence in safety and health in their industries, the surrounding community and the contractors that service them.

E. **CONTINUOUS IMPROVEMENT** - NV-VPP participants must demonstrate continuous improvement in the operation and impact of their safety and health management systems. Annual NV-VPP self-evaluations help participants measure success, identify areas needing improvement, and determine needed changes. NV-VPP onsite evaluation teams verify this improvement.

F. **EMPLOYEE AND EMPLOYER RIGHTS** - Participation in NV-VPP does not diminish employee and employer rights and responsibilities under the OSH Act.

VII. **CATEGORIES OF PARTICIPATION** - NV-VPP consists of the **Star Program**. The Star Program recognizes the safety and health excellence of worksites where employees are successfully protected from fatalities, injuries, and illnesses by the implementation of comprehensive and effective workplace safety and health management systems. These worksites are self-sufficient in identifying and controlling workplace hazards and can demonstrate a safety process that meets or exceeds the code of Federal Regulations for Occupational Safety and Health.

VIII. **THE ELEMENTS** - To qualify for NV-VPP, an applicant/participant must operate a comprehensive safety and health management system that includes four essential elements and their sub-elements. These elements, when integrated into a worksite’s daily operations, can reduce the incidence and severity of illnesses and injuries:

A. Management leadership and employee involvement
B. Worksite analysis
C. Hazard prevention and control
D. Safety and health training
Chapter 2
Responsibilities

I. **INTRODUCTION** - This chapter describes NV-VPP’s responsibilities for managing the Voluntary Protection Program. These responsibilities must be carried out by the identified individual or his/her designee.

II. The SCATS CAO is responsible for all decisions relating to approval of new participants, lifting of 1-Year Conditional status, and termination of participation. Final approval will be granted by the DIR Administrator.

III. **NV-VPP Management** - NV-VPP Manager is responsible for the coordination of the NV-VPP. All SCATS employees must develop and maintain a working knowledge of the NV-VPP.

   A. **APPLICATION PROCESSING** – The NV-VPP Manager will process applications to the NV-VPP in accordance with Chapter 5. In addition:

      1. Provide application information and assistance to interested employers, employee groups, and other parties such as trade associations, state and local governments.

      2. Obtain from the OSHA website and review the applicant’s OSHA inspection history to determine its eligibility for NV-VPP.

   B. **ONSITE EVALUATIONS** – SCATS will:

      1. Ensure that an onsite evaluation is conducted within 6 months of accepting an application.

      2. Schedule onsite evaluations, taking into consideration due dates, deadlines, priorities, and coordination with company officials.

      3. Inform NVOSHA so that the participant can be removed from the programmed inspection list. Such removal may occur after the site has made it into VPP.

      4. Ensure that an onsite evaluation report is drafted onsite, including a preliminary recommendation for the DIR Administrator’s consideration.

   C. **APPROVAL** – SCATS will:

      1. Ensure completion of onsite evaluation reports.

      2. Inform applicants of the SCATS decisions regarding approval.

      3. Inform NVOSHA of the participant’s approval.

   D. **ANNUAL SUBMISSIONS FROM NV-VPP PARTICIPANTS** (See Appendix C)

      1. NV-VPP Manager ensure that each NV-VPP participant’s annual submission is received by February 15th of each year. On a case-by-case basis, additional time, not to exceed 45 days, may be negotiated. If after 45 days, the annual submission has not been received, the participant may be asked to withdraw from the program.

      2. SCATS will review the annual submissions and:

         a. Request an explanation from the participant if a substantial increase (or decrease) in rates or some problem with the program evaluation is noted.
b. If an unresolved serious problem is evident, make arrangements with the company for an onsite consultation visit.

3. As a courtesy, notify the participant in writing that the annual evaluation submission has been received. Note any areas of concern.

E. **REAPPROVAL - SCATS will:**

1. Track current NV-VPP participants and ensure that onsite evaluations to determine a recommendation for reapproval are scheduled and conducted in accordance with Chapter 6.II.A.

2. Any approved extensions of time between onsite evaluations must be documented.

F. **WITHDRAWAL OR TERMINATION** - Upon receiving a withdrawal letter from a participant, or upon termination of a participant, the NV-VPP Manager must:

1. Remove the participant’s application, onsite evaluation reports, approval letters, and annual evaluations from the public file.

2. Notify NVOSHA of the withdrawal or termination so that the worksite may be returned to the programmed inspection list, if applicable, at the time of the next inspection cycle.

G. **SPECIAL CIRCUMSTANCES – SCATS will:**

1. Discuss any change in ownership, organization, and union representation (if applicable) with the participant representative, and schedule an onsite visit if needed to evaluate the change’s impact.

2. Coordinate and review any formal or non-formal complaints, referrals, fatalities or catastrophes, accidents or incidents, and resultant inspection reports or letters. (See Chapter 7.)

H. **ONGOING ASSISTANCE** – The SCATS staff will be available to assist participants as needed, i.e., when changes occur at the worksite that may affect continued participation.

I. **MAINTENANCE OF PARTICIPANT FILES** - The NV-VPP Manager must maintain a public file of all approved participants in the State of Nevada and make available to the public on request:

1. NV-VPP application and amendments

2. Onsite evaluation reports

3. DIR Administrator’s letter of recommendation

4. Notification to NVOSHA removing an approved participant from the general inspection list.

5. Participant’s annual self-evaluations.

6. Related formal correspondence.
Chapter 3

Requirements for Star

I. INTRODUCTION - This chapter details requirements for the Star program as well as the unique requirements for resident contractors at NV-VPP participants.

A. THE STAR PROGRAM - The Star Program recognizes the very best workplaces that are in compliance with NVOSHA and OSHA regulations and that operate outstanding safety and health management systems for employee protection. All of the VPP requirements, published in Federal Register Notice 65 FR 45650-45663 and detailed below, must be in place and working effectively for at least 1 year prior to Star approval.

B. TERM OF PARTICIPATION - There is no limit to the term of participation in Star, as long as a participant continues to meet all Star requirements and to maintain Star quality.

C. INJURY AND ILLNESS HISTORY REQUIREMENTS - Evaluate the applicant/participant’s injury and illness history by using a 3-year total case incidence rate (TCIR) and a 3-year days away, restricted, and/or job transfer incidence rate (DART rate) (See Appendix A.). The 3-year TCIR and DART rates must be below at least 1 of the 3 most recent years of specific industry national averages for nonfatal injuries and illnesses at the most precise level published by the Bureau of Labor Statistics (BLS). Compare both rates to a single year.

An alternative rate calculation may be used for eligible smaller worksites using their best 3 out of the most recent 4 years of incidence rates. (See Appendix A)

D. COMPREHENSIVE SAFETY AND HEALTH MANAGEMENT SYSTEM REQUIREMENTS - The following safety and health management system elements and sub-elements must be implemented. For small applicants/participants, at the discretion of the onsite team, some of the requirements may be implemented and documented less formally.

1. Management Leadership and Employee Involvement
   a. Management Commitment - Management demonstrates its commitment by:
      - Establishing, documenting, and communicating to employees and contractors clear goals that are attainable and measurable, objectives that are relevant to workplace hazards and trends of injury and illness, and policies and procedures that indicate how to accomplish the objectives and meet the goals.
      - Signing a statement of commitment to safety and health
      - Meeting and maintaining NV-VPP requirements
      - Maintaining a written safety and health management system that documents the elements and sub-elements, procedures for implementing the elements, and other safety and health programs including those required by NVOSHA and OSHA standards.
      - Identifying persons whose safety and health responsibility includes carrying out safety and health goals and objectives, and clearly defining and communicating their responsibilities in their written job descriptions.
• Assigning adequate authority to those persons who are responsible for safety and health, so they are able to carry out their responsibilities.

• Providing and directing adequate resources (including time, funding, training, personnel, etc.) to those responsible for safety and health, so they are able to carry out their responsibilities.

• Holding those who are assigned responsibility for safety and health accountable for meeting their responsibilities through a documented performance standards and appraisal system.

• Planning for typical as well as unusual/emergency safety and health expenditures in the budget, including funding for prompt correction of uncontrolled hazards.

• Integrating safety and health into other aspects of planning, such as planning for new equipment, processes, buildings, etc.

• Establishing lines of communication with employees and allowing for reasonable employee access to top management at the worksite.

• Setting an example by following the rules, wearing any required personal protective equipment, reporting hazards, reporting injuries and illnesses, and basically doing anything that they expect employees to do.

• Ensuring that all employees (including contract employees) are provided equal, high-quality safety, and health protection.

• Conducting an annual evaluation of the safety and health management system in order to:
  ▪ Maintain knowledge of the hazards of the worksite.
  ▪ Maintain knowledge of the effectiveness of system elements.
  ▪ Ensure completion of the previous years’ recommendations.
  ▪ Modify goals, policies, and procedures.

b. Employee Involvement - Employees must be involved in the safety and health management system in at least three meaningful, constructive ways in addition to their right to report a hazard. Avenues for employees to have input into safety and health decisions include participation in audits, accident/incident investigations, self-inspections, suggestion programs, planning, training, job hazard analyses, and appropriate safety and health committees and teams. Employees do not meet this requirement by participating in incentive programs or simply working in a safe manner.

• Employees must be trained for the task(s) they will perform. For example, they must be trained in hazard recognition to participate in self-inspections.

• Employees must receive feedback on any suggestions, ideas, reports of hazards, etc. that they bring to management’s attention. An applicant/participant must provide documented evidence that employees’
suggestions were followed up and implemented when appropriate and feasible.

- All employees, including new hires, must be notified about participation in NV-VPP and employees’ rights (such as the right to file a complaint) under the OSH Act. Orientation training curriculum must include this information.

- Employees and contractors must demonstrate an understanding of and be able to describe the fundamental principles of NV-VPP.

c. **Contract Employee Coverage** – All contract employees and resident contract employees must be provided with safety and health protection equal in quality to that provided to employees.

- All contractors, whether regularly involved in routine site operations or engaged in temporary projects or repair, must follow the safety and health rules of the host.

- NV-VPP participants must have in place a documented oversight and management system covering applicable contractors. Such a system must:
  - Ensure that safety and health considerations are addressed during the process of selecting contractors and when contractors are onsite.
  - Encourage contractors to develop and operate effective safety and health management systems.
  - Include provisions for timely identification, correction, and tracking of uncontrolled hazards in contractor work areas.
  - Include a provision for removing a contractor or contractor’s employees from the worksite for safety or health violations. Note: A worksite may have been operating effectively for 1 year without actually invoking this provision if just cause to remove a contractor or contractor’s employee did not occur.
  - Monitor high hazard contractor operations. High hazard contractor operations may include, but are not limited to, the following:
    - Use of ladders
    - Electrical work
    - Welding
    - Use of hazardous chemicals
    - Use of explosives
    - Control of hazardous energies (LOTO)

- **Injury and Illness Data Requirements**
  - Nested contractors (such as contracted maintenance workers) and temporary employees who are supervised by host site management are
governed by the host’s safety and health management system and are, therefore, included in the host’s rates.

- Management must maintain copies of the TCIR and DART rate data for all contractors based on hours worked at the worksite. (See Appendix A.)
- Participants must report all applicable contractors’ TCIR and DART rate data to NV-VPP annually.

- **Training** - Managers, supervisors, and non-supervisory employees of contract employers must be made aware of:
  - The hazards they may encounter while on the worksite.
  - How to recognize hazardous conditions and the signs and symptoms of workplace-related illnesses and injuries.
  - The implemented hazard controls, including safe work procedures.
  - Emergency procedures.

  d. **Safety and Health Management System Annual Evaluation** - There must be a system and written procedures in place to annually evaluate the safety and health management system. The annual evaluation must be a critical review and assessment of the effectiveness of all elements and sub-elements of a comprehensive safety and health management system. An annual evaluation that is merely a workplace inspection with a brief report pointing out hazards or a general statement of the sufficiency of the system is inadequate for purposes of NV-VPP qualification.

  - The written annual evaluation must identify the strengths and weaknesses of the safety and health management system and must contain specific recommendations, time lines, and assignment of responsibility for making improvements. It must also document actions taken to satisfy the recommendations.
  - The annual evaluation may be conducted by participant employees with managers, qualified corporate staff, or outside sources who are trained in conducting such evaluations.
  - At least one annual evaluation and demonstrated corrective action must be completed before NV-VPP approval.
  - The annual evaluation must be included with the participant’s annual submission to NV-VPP. Appendix C provides a suggested format.

2. **Worksite Analysis** - A hazard identification and analysis system must be implemented to systematically identify basic and unforeseen safety and health hazards, evaluate their risks, and prioritize and recommend methods to eliminate or control hazards to an acceptable level of risk. Through this system, management must gain a thorough knowledge of the safety and health hazards and employee risks. The required methods of hazard identification and analysis are described below.
a. **Baseline Safety and Industrial Hygiene Hazard Analysis** - A baseline survey and analysis is a first attempt at understanding the hazards at a worksite. It establishes initial levels of exposure (baselines) for comparison to future levels, so that changes can be recognized. Systems for identifying safety and industrial hygiene hazards, while often integrated, may be evaluated separately. Baseline surveys must:

- Identify and document common safety hazards associated with the worksite (such as those found in NVOSHA and OSHA regulations or building standards, for which existing controls are well known), and how they are controlled.
- Identify and document common health hazards (usually by initial screening using direct-reading instruments) and determine if further sampling (such as full-shift dosimetry) is needed.
- Identify and document safety and health hazards that need further study.
- Cover the entire worksite; indicate who conducted the survey, and when it was completed.

The original baseline hazard analysis need not be repeated subsequently unless warranted by changes in processes, equipment, hazard controls, etc.

b. **Hazard Analysis of Routine Jobs, Tasks, and Processes** - Task-based or system/process hazard analyses must be performed to identify hazards of routine jobs, tasks, and processes in order to recommend adequate hazard controls. Acceptable techniques include, but are not limited to: Job Hazard Analysis (JHA), and Process Hazard Analysis (PHA).

Hazard analyses should be conducted on routine jobs, tasks and processes that:

- Have written procedures
- Have had injuries/illnesses associated with them or have experienced significant incidents or near-misses
- Are perceived as high-hazard tasks, i.e., they could result in a catastrophic explosion, electrocution, or chemical over-exposure
- Have been recommended by other studies and analyses for more in-depth analysis
- Are required by a regulation or standard
- Any other instance when the NV-VPP applicant or participant determines that hazard analysis is warranted.

c. **Hazard Analysis of Significant Changes** - Hazard analysis of significant changes, including but not limited to non-routine tasks (such as those performed less than once a year), new processes, materials, equipment and facilities, must be conducted to identify uncontrolled hazards prior to the activity or use, and must lead to hazard elimination or control.
If a non-routine or new task is eventually to be done on a routine basis, then a hazard analysis of this routine task should subsequently be developed.

d. **Pre-use analysis** - When a worksite is considering new equipment, chemicals, facilities, or significantly different operations or procedures, the safety and health impact to the employees must be reviewed. The level of detail of the analysis should be commensurate with the perceived risk and number of employees affected. This practice should be integrated in the procurement/design phase to maximize the opportunity for proactive hazard controls.

e. **Documentation and Use of Hazard Analyses** - Hazard analyses performed to meet the requirements of c. or d., above, must be documented and must:
   - Consider both health and safety hazards.
   - Identify the steps of the task or procedure being analyzed, hazard controls currently in place, recommendations for needed additional or more effective hazard controls, dates conducted, and responsible parties.
   - Be used in training in safe job procedures, in modifying workstations, equipment or materials, and in future planning efforts.
   - Be easily understood.
   - Be updated as the environment, procedures, or equipment change, or errors are found that invalidate the most recent hazard analyses.

f. **Routine Self-Inspections** - A system is required to ensure routinely scheduled self-inspections of the workplace. It must include written procedures that determine the frequency of inspection and areas covered those responsible for conducting the inspections, recording of findings, responsibility for abatement, and tracking of identified hazards for timely correction. Findings and corrections must be documented.
   - Inspections must be made at least monthly, with the actual inspection schedule being determined by the types and severity of hazards.
   - The entire worksite must be covered at least once each quarter.
   - Top management and others, including employees who have knowledge of the written procedures and hazard recognition, may participate in the inspection process.
   - Personnel qualified to recognize workplace hazards, particularly hazards peculiar to their industry, must conduct inspections.
   - Documentation of inspections must evidence thoroughness beyond the perfunctory use of checklists.

g. **Hazard Reporting System for Employees** - The applicant/participant must operate a reliable system that enables employees to notify appropriate management personnel in writing--without fear of reprisal--about conditions that appear hazardous, and to receive timely and appropriate responses. The system
can be anonymous and must include timely responses to employees and tracking of hazard elimination or control to completion.

h. **Industrial Hygiene (IH) Program** - A written IH program is required. The program must establish procedures and methods for identification, analysis, and control of health hazards for prevention of occupational disease.

- **IH Surveys** - Additional expertise, time, technical equipment, and analysis beyond the baseline survey may be required to determine which environmental contaminants (whether physical, biological, or chemical) are present in the workplace, and to quantify exposure so that proper controls can be implemented.

- **Sampling Strategy** - The written program must address sampling protocols and methods implemented to accurately assess employees’ exposure to health hazards. Sampling should be conducted when:
  - Performing baseline hazard analysis, such as initial screening and grab sampling.
  - Baseline hazard analysis suggests that more in-depth exposure analysis, such as full-shift sampling, is needed.
  - Particularly hazardous substances (as indicated by an OSHA standard, chemical inventory, material safety data sheet, etc.) are being used or could be generated by the work process.
  - Employees have complained of signs of illness.
  - Exposure incidents or near-misses have occurred.
  - It is required by a standard or other legal requirement.
  - Changes have occurred in such things as the processes, equipment, or chemicals used.
  - Controls have been implemented and their effectiveness needs to be determined.
  - Any other instance when the NV-VPP applicant or participant determines that sampling is warranted.

- **Sampling Results** - Sampling results must be analyzed and compared to at least OSHA permissible exposure limits (PELs) to determine employees’ exposure and possible overexposure. Comparison to more restrictive levels, such as action levels, threshold limit values (TLVs), or self-imposed standards is encouraged to reduce exposures to the lowest feasible level.
  - **Documentation** - The results of sampling must be documented and must include a description of the work process, controls in place, sampling time, exposure calculations, duration, route, and frequency of exposure, and number of exposed employees.
  - **Communication** - Sampling results must be communicated to employees and management.
- **Use of Results** - Sampling results must be used to identify areas for additional, more in-depth study, to select hazard controls, and to determine if existing controls are adequate.

- **IH Expertise** - IH sampling should be performed by an industrial hygienist, but initial sampling, full-shift sampling, or both may be performed by safety staff members with special training in the specific procedures for the suspected or identified health hazards in the workplace.

- **Procedures** - Standard, nationally recognized procedures must be used for surveying and sampling as well as for testing and analysis.

- **Use of Contractors** - If an outside contractor conducts industrial hygiene surveys, the contractor’s report must include all sampling information listed above and must be effectively communicated to site management. Any recommendations contained in the report should be considered and implemented where appropriate. Use of contractors does not remove responsibility for the IH program, including identification and control of health hazards, from the NV-VPP applicant or participant.

i. **Investigation of Accidents and Near-Misses** - The applicant/participant must investigate all accidents and near-misses and must maintain written reports of the investigations. Accident and near-miss investigations must:

   - Be conducted by personnel trained in accident investigation techniques. Personnel who were not involved in the accident or who do not supervise the injured employee(s) should conduct the investigation to minimize potential conflicts of interest.

   - Document the entire sequence of relevant events.

   - Identify all contributing factors, emphasizing failure or lack of hazard controls.

   - Determine whether the safety and health management system was effective, and where it was not, provide recommendations to prevent recurrence.

   - Not place undue blame or reprisal on employees, although human error can be a contributing factor.

   - Assign priority, time frames, and responsibility for implementing recommended controls.

   - The results of investigations (to include, at a minimum, a description of the incident and the corrections made to avoid recurrence) must be made available to employees on request, although the actual investigation records need not be provided.

j. **Trend Analysis** - The process must include analysis of information such as injury/illness history, hazards identified during inspections, employee reports of hazards, and accident and near-miss investigations for the purpose of detecting trends. The results of trend analysis must be shared with employees and
management and utilized to direct resources; prioritize hazard controls; and determine or modify goals, objectives, and training to address the trends.

3. Hazard Prevention and Control - Management must ensure the effective implementation of systems for hazard prevention and control and ensure that necessary resources are available, including the following:

a. **Certified Professional Resources** - Access to certified safety and health professionals and other licensed health care professionals is required. They may be provided by offsite sources such as corporate headquarters, insurance companies, or private contractors. NV-VPP will accept certification from any recognized accrediting organization.

b. **Hazard Elimination and Control Methods** - The types of hazards employees are exposed to, the severity of the hazards, and the risk the hazards pose to employees should all be considered in determining methods of hazard prevention, elimination, and control. In general, the following hierarchy should be followed in determining hazard elimination and control methods. When engineering controls have been studied, investigated, and implemented, yet still do not bring employees’ exposure levels to below OSHA permissible exposure limits; or when engineering controls are determined to be infeasible, then a combination of controls may be used. Whichever controls an applicant/participant chooses to employ, the controls must be understood and followed by all affected parties; appropriate to the worksite’s hazards; equitably enforced through the disciplinary system; written, implemented, and updated by management as needed; used by employees; and incorporated in training, positive reinforcement, and correction programs.

- **Engineering** - Engineering controls directly eliminate a hazard by such means as substituting a less hazardous substance, by isolating the hazard, or by ventilating the workspace. These are the most reliable and effective controls.

- **Protective Safety Devices** - Although not as reliable as true engineering controls, such methods include interlocks, redundancy, failsafe design, system protection, fire suppression, and warning and caution notes.

- **Administrative** - Administrative controls significantly limit daily exposure to hazards by control or manipulation of the work schedule or work habits. Job rotation is a type of administrative control.

- **Work Practices** - These controls include workplace rules, safe and healthful work practices, personal hygiene, housekeeping and maintenance, and procedures for specific operations.

- **Personal Protective Equipment (PPE)** - PPE to be used are determined by hazards identified in hazard analysis. PPE should only be used when all other hazard controls have been exhausted or more significant hazard controls are not feasible.

c. **Hazard Control Programs** - Applicants and participants must be in compliance with any hazard control program required by an OSHA standard, such as PPE, Respiratory Protection, Lockout/Tagout, Confined Space Entry, Process Safety
Management, or Bloodborne Pathogens. NV-VPP applicants and participants must periodically review these programs (most OSHA standards require an annual review) to ensure they are up-to-date.

Participants who are covered by the PSM standard must additionally submit answers to all applicable questions found in the NV-VPP PSM Application Supplement. Answers must address all PSM-covered operations.

d. **Occupational Health Care Program**
   
   - Licensed health care professionals must be available to assess employee health status for prevention, early recognition, and treatment of illness and injury.
   
   - Arrangements for needed health services such as pre-placement physicals, audiograms, and lung function tests must be included.
   
   - Employees trained in first aid, CPR providers, physician care, and emergency medical care must be available for all shifts within a reasonable time and distance. The applicant or participant may consider, based on worksite conditions, providing Automated External Defibrillators (AEDs) and training in their use.
   
   - Emergency procedures and services including provisions for ambulances, emergency medical technicians, emergency clinics or hospital emergency rooms should be available and explained to employees on all shifts. Also, see paragraph h, below.

e. **Preventive Maintenance of Equipment** - A written preventive and predictive maintenance system must be in place for monitoring and maintaining workplace equipment. Equipment must be replaced or repaired on a schedule, following manufacturers’ recommendations, to prevent it from failing and creating a hazard. Documented records of maintenance and repairs must be kept. The system must include maintenance of hazard controls such as machine guards, exhaust ventilation, mufflers, etc.

f. **Tracking of Hazard Correction** - A documented system must be in place to ensure that hazards identified by any means (self-inspections, accident investigations, employee hazard reports, preventive maintenance, injury/illness trends, etc.) are assigned to a responsible party and corrected in a timely fashion. This system must include methods for:
   
   - Recording and prioritizing hazards, and
   
   - Assigning responsibility, time frames for correction, interim protection, and follow-up to ensure abatement.

g. **Disciplinary System** - A documented disciplinary system must be in place. The system must include enforcement of appropriate action for violations of the safety and health policies, procedures, and rules. The disciplinary policy must be clearly communicated and equitably enforced to employees and management. The disciplinary system for safety and health can be a subpart of an all-encompassing disciplinary system.
h. **Emergency Preparedness and Response** - Written procedures for response to all types of emergencies (fire, chemical spill, accident, terrorist threat, natural disaster, etc.) on all shifts must be established, must follow OSHA standards, must be communicated to all employees, and must be practiced at least annually. These procedures must list requirements or provisions for:

- Assessment of the emergency
- Assignment of responsibilities (such as incident commander)
- First aid
- Medical care
- Routine and emergency exits
- Emergency telephone numbers
- Emergency meeting places
- Training drills, minimally including annual evacuation drills. Drills must be conducted at times appropriate to the performance of work so as not to create additional hazards. Coverage of critical operations must be provided so that all employees have an opportunity to participate in evacuation drills.
- Documentation and critique of evacuation drills and recommendations for improvement
- Personal protective equipment where needed.

4. **Safety and Health Training**

   a. Training must be provided so that managers, supervisors, non-supervisory employees, and contractors are knowledgeable of the hazards in the workplace, how to recognize hazardous conditions, signs and symptoms of workplace-related illnesses, and safe work procedures.

   b. Training required by NVOSHA and OSHA standards must be provided in accordance with the particular standard.

   c. Managers and supervisors must understand their safety and health responsibilities and how to carry them out effectively.

   d. New employee orientation/training must include, at a minimum, discussion of hazards at the worksite, protective measures, emergency evacuation, employee rights under the NVOSH Act, and NV-VPP.

   e. Training should be provided for all employees regarding their responsibilities for each type of emergency. Managers, supervisors, and non-supervisory employees, including contractors and visitors, must understand what to do in emergency situations.

   f. Persons responsible for conducting hazard analysis, including self-inspections, accident/incident investigations, job hazard analysis, etc., must receive training to carry out these responsibilities, e.g., hazard recognition training, accident investigation techniques, etc.
g. Training attendance must be documented. Training frequency must meet NVOSHA and OSHA standards, or for non-NVOSHA/OSHA required training, be provided at adequate intervals. Additional training must be provided when changes occur in work processes, new equipment, new procedures, etc.

h. Training curricula must be up-to-date, specific to worksite operations, and modified when needed to reflect changes and/or new workplace procedures, trends, hazards and controls identified by hazard analysis. Training curricula must be understandable for all employees.

i. Persons who have specific knowledge or expertise in the subject area must conduct training.

j. Where personal protective equipment (PPE) is required, employees must understand that it is required, why it is required, its limitations, how to use it, and maintenance.

II. RESIDENT CONTRACTORS - Contractors working at a NV-VPP worksite may apply to NV-VPP. The requirements for the resident contractor are identical to those of NV-VPP generally, with the following additions:

A. The host must be an approved NV-VPP (Star) participant before the resident contractor may submit its application. In addition, the resident contractor must have a minimum of 12 months on site before submitting an application.

B. The type of work being conducted by the resident contractor must be evaluated to determine the appropriate industry classification.

   1. If the resident contractor is fulfilling a function that would normally be filled by the host (such as general maintenance), then the resident contractor should be assigned the host’s industry classification.

   2. If the resident contractor is independent and would not normally be associated with the host’s industry or service, then the contractor’s own industry classification should be assigned.

C. If the resident contractor has less than 3 years on site, apply the injury and illness history requirements of the appropriate industry classification.

D. The resident contractor’s participation, once approved, is contingent upon the host’s continued participation in NV-VPP.

E. REPLACEMENT OF AN APPROVED RESIDENT CONTRACTOR - When a NV-VPP resident contractor at a NV-VPP worksite is replaced by a new resident contractor, whether NV-VPP approval will transfer to the new resident contractor depends on several factors.

   1. NV-VPP status can transfer if 75% or more of the employees remain employed with the new resident contractor and if the new resident contractor:

      a. Submits a new letter of management commitment,

      b. Submits a new self-evaluation, and
c. Receives a satisfactory NV-VPP onsite evaluation within 12 months (6 months is preferred).

2. A new NV-VPP application is required if fewer than 75% of the employees remain employed with the new resident contractor.

F. Continuing NV-VPP status of an approved subcontractor to the initial resident contractor depends on the status of the new resident contractor.

1. If NV-VPP status transfers to the new resident contractor, as in E1 above, the subcontractor maintains its NV-VPP status.

2. If the new resident contractor is required to submit a new NV-VPP application, as in E2 above, the subcontractor must withdraw from NV-VPP and then reapply after approval of the new resident contractor.
Chapter 4

THE APPLICATION PROCESS

I. ELIGIBILITY AND PROGRAM REQUIREMENTS

A. ELIGIBILITY - NV-VPP accepts applications from general industry in the private sector and public sector. NV-VPP accepts applications from owners and site managers who control worksite operations and have ultimate responsibility for assuring safe and healthful working conditions at the worksite. Applications for participation are subject to the following conditions.

1. Employees’ Support of Participation - Employees must support participation in NV-VPP. Requirements vary according to whether the applicant/participant has a recognized employee representative, (i.e., as explained in the NAC 618.656, Authorized employee representative defined.

2. NVOSHA Inspection History - If NVOSHA has inspected an applicant worksite in the 36 months preceding the application, the inspection, abatement, and any other history of interaction with NVOSHA must indicate good faith attempts by the employer to improve safety and health at the worksite. This includes verification of correction of all serious violations. In addition, the existence of any of the following at the worksite precludes participation in NV-VPP:
   a. Open enforcement investigations.
   b. Pending or open contested citations or notices under appeal at the time of application.
   c. Affirmed willful or NRS 618.445 violations during the 36 months prior to application.
   d. Unresolved, outstanding enforcement actions such as long-term abatement agreements or contests.

   NVOSHA inspection history pertaining to a non-NV-VPP worksite of the same company will not adversely affect NV-VPP participation, unless it is determined that a corporate decision, program, or policy, which applies to all company worksites, does not meet NVOSHA or OSHA standards.

B. PROGRAM REQUIREMENTS - Applicants must understand and agree, through assurances, to fulfill program requirements for participation in the NV-VPP.
1. Applicants must assure that:
   a. The applicant will comply with the Act and will correct in a timely manner all hazards discovered through self-inspections, employee notification, accident investigations, an NV-VPP onsite review, process hazard reviews, annual evaluations, or any other means. The applicant will provide effective interim protection as necessary.
   b. Worksite deficiencies related to compliance with NV-VPP requirements and identified during the NV-VPP onsite review will be corrected within 90 days, with interim protection provided to employees.
   c. Employees support the NV-VPP application.
   d. NV-VPP elements are in place, and the requirements of the elements will be met and maintained.
   e. Employees, including newly hired employees and contract employees when they reach the worksite, will have the NV-VPP explained to them, including employee rights under the program and under the Act.
   f. Employees performing safety and health duties as part of the applicant's safety and health management system will be protected from discriminatory actions resulting from their carrying out such duties, just as NRS 618.445 protects employees who exercise their rights.
   g. Employees will have access to the results of self-inspections, accident investigations, and other safety and health management system data upon request. At unionized worksites, this requirement may be met through the employee representative’s access to these results.
   h. The information listed below will be maintained and available for NV-VPP review to determine initial and continued approval to the NV-VPP:
      - Written safety and health management system
      - All documentation enumerated in Chapter 5.III.B.
      - Any agreements between management and the collective bargaining agent(s) concerning safety and health
      - Any data necessary to evaluate the achievement of individual 1-Year Conditional goals
   i. Each year by February 15, each participant must send its annual evaluation submission to the NV-VPP Manager (See Appendix B). Sites covered under the PSM Standard must additionally complete the PSM Questionnaire.
   j. Whenever significant organizational, ownership, union, or operational changes occur, such as but not limited to a change in management, takeover, or merger, the participant will provide NV-VPP within 60 days a new statement of commitment signed by both management and any authorized collective bargaining agents, as appropriate.

2. The applicant must demonstrate a willingness to follow through on all assurances.
3. Employees must be aware of the recourse available to them if management fails to fulfill any of these assurances. This may include rescinding their support of NV-VPP participation or exercising the right to file a NVOSHA complaint.

II. PREPARING THE APPLICATION

A. PRE-APPLICATION ASSISTANCE - The SCATS staff may visit a prospective applicant’s site to offer assistance in the application process or before scheduling the onsite evaluation, to obtain additional information or clarification of information provided in the application. Applicants are also highly encouraged to request a consultation survey to assess the current status of their safety and health programs.

B. SINGLE OR MULTIPLE APPLICATIONS - In most cases, a single NV-VPP application is sufficient. Exceptions may occur, such as the following circumstances:

<table>
<thead>
<tr>
<th>If:</th>
<th>And:</th>
<th>Then:</th>
</tr>
</thead>
<tbody>
<tr>
<td>The applicant operates at a worksite where operations are physically separated but where a single, effective onsite evaluation is still feasible.</td>
<td>All applicant employees are covered by a single safety and health management system.</td>
<td>A single application is required.</td>
</tr>
<tr>
<td>Less than 50 percent of the predominant work* performed by employees is performed at off-site location(s), for example, the sales force of a manufacturing company.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The applicant has multiple operations.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The applicant’s operations are separated by distances that would prevent an effective, single onsite evaluation.</td>
<td>All employees may or may not be covered by a single safety and health management system.</td>
<td>More than one application is required.</td>
</tr>
<tr>
<td>More than one employer at a single worksite is applying for NV-VPP (for example, an office building).</td>
<td>N/A</td>
<td></td>
</tr>
</tbody>
</table>

C. CONFIDENTIALITY - During the application process, prior to program approval, the application, and all related information is confidential and, therefore, must be used solely for NV-VPP related activities. Only applications of approved participants will be kept in a public file. If an applicant withdraws, the original application and related documents must be returned. The NV-VPP Manager’s marked working copy will be kept on file for 1 year in order to respond to any questions the applicant may have.
III. PROCEDURES FOR RECEIPT AND REVIEW OF APPLICATIONS

A. The NV-VPP manager must process applications as received.

B. **ORIGINAL APPLICATION** - Upon receipt of an application, the NV-VPP Manager must stamp it with the date received and reserve it for placement in the public file, should the applicant be approved to NV-VPP.

C. **ACKNOWLEDGMENT AND RECORD OF RECEIPT** – The NV-VPP Manager must notify the applicant by letter or e-mail of receipt of the application within 15 working days. The acknowledgment must also include the name and telephone number of the NV-VPP Manager or a designee.

D. **NV-VPP REVIEW** - The SCATS management must oversee the application review process and may delegate the review of individual applications to other personnel trained to perform this function. The reviewer must determine if the application includes all required information listed in the most recent NV-VPP application instructions, if the applicant is eligible for onsite review, to pinpoint any major deficiencies, and to notify the applicant that the identified deficiencies must be rectified prior to application acceptance. In general, application review should include an examination of the following:

1. **General Information** - Ensure that the general information includes but is not limited to: the applicant’s worksite name, address, key contact personnel and titles, corporate identification, collective bargaining agent contact information, number of employees and contractor employees, type of work performed, and products produced.

2. **Injury and Illness Rates** - The rates supplied in the application must be examined as follows:
   a. For general industry, the reviewer of the application must calculate the 3-year total case incidence rate (TCIR) for injuries and illnesses, using data from the last 3 complete calendar years. Similarly, calculate the 3-year days away, restricted, and/or job transfer (DART) rate. [See Appendix A]
   b. Evaluate the applicant/participant’s injury and illness history by using a 3-year total case incidence rate (TCIR) and a 3-year days away, restricted, and/or job transfer incidence rate (DART rate). (See Appendix A) The 3-year TCIR and DART rates must be below at least 1 of the 3 most recent years of specific industry national averages for nonfatal injuries and illnesses at the most precise level published by the Bureau of Labor Statistics (BLS). Compare both rates to a single year. An alternative rate calculation may be used for eligible smaller worksites using their best 3 out of the most recent 4 years of incidence rates. (See Appendix A)
   c. The reviewer must determine if the applicant’s injury and illness rates are low enough to warrant an onsite review.

3. **Safety and Health Elements** - The reviewer must determine if the application describes how the applicant is meeting the NV-VPP requirements, addressing each of
the elements and sub-elements of an effective safety and health management system listed in Chapter 3(II)(C) and as outlined below.

a. **Management Leadership and Employee Involvement** - The applicant must describe top-level management leadership in the applicant/participant’s safety and health management system. Note: Management must clearly describe its commitment to meeting and maintaining the requirements of NV-VPP. The applicant must also describe how employees are involved in safety and health.

b. **Worksite Analysis** - The applicant must describe methods used to recognize, identify, and analyze hazards. Effective worksite analysis provides the information managers and employees need for a thorough understanding of all hazardous situations to which they may be exposed.

c. **Hazard Prevention and Control** - The applicant must describe and give examples of how hazards are addressed, including preventative maintenance, occupational health care program, emergency preparedness, and hazard elimination employing the hierarchy of controls.

d. **Safety and Health Training** - The applicant must describe its formal and informal safety and health training program for managers, supervisors, and employees. The information must include training protocols and schedules of training.

4. **Assurances** - The reviewer must determine that the application contains a signed statement of assurances and that all of the required assurances have been included. [See I.B., above]

5. **Additional Attachments** - The reviewer must determine if the application contains the required additional attachments, as follows:
   a. Copy of top-level safety policy
   b. Organization chart
   c. Most recent annual evaluation
   d. Site map
   e. Signed statement of union support, if applicable
   f. NV-VPP PSM Application Supplement, if applicable

E. **INCOMPLETE APPLICATIONS** - If the application is considered incomplete, the NV-VPP Manager must notify the applicant, noting the missing elements, and requesting that the missing information be submitted within 90 days. If the additional information is not provided within that time, the application must be returned to the applicant. It can be resubmitted when completed.

F. **INELIGIBLE APPLICATIONS** - If it is clear that the applicant cannot qualify for NV-VPP, SCATS must ask the applicant to withdraw the application within 30 days. If the application is not withdrawn, the SCATS must return the application with a letter indicating the reasons the application was denied by NV-VPP.
G. VOLUNTARY WITHDRAWAL OF AN APPLICATION - An applicant may withdraw the application by notifying SCATS. The withdrawal is effective on the date the notification is received. Then the NV-VPP Manager must return the original application to the applicant within 10 working days. If the application had already been accepted, the NV-VPP Manager must retain a working copy for 1 year, for use in responding to questions that may arise.

H. DECISION TO CONDUCT THE ONSITE EVALUATION - Once an application is accepted, SCATS must notify the applicant by letter or e-mail in a timely manner that an onsite evaluation will be conducted. However, no onsite evaluation may be conducted until all enforcement actions have been closed.
Chapter 5
ONSITE EVALUATIONS

I. PURPOSE - An onsite evaluation consists of a thorough evaluation of a VPP applicant or participant’s safety and health management system in order to recommend approval or reapproval. Onsite evaluations are carried out by a team consisting of SCATS staff and other qualified team members.

II. PREPARATION FOR ONSITE EVALUATIONS

A. SCHEDULING ONSITE EVALUATIONS - For new applicants, an onsite evaluation must be conducted within 6 months of the receipt of a completed application. For participants, onsite evaluations must be conducted as follows:

1. Star Participants - The first evaluation must be conducted between 30 and 42 months following initial approval. Thereafter, onsite evaluations must be completed within 60 months of the preceding onsite evaluation.

2. 1-Year Conditional Star Participants - The onsite evaluation must be conducted within 15 months (90 days plus 1 year’s experience operating at Star level) after the participant was placed on conditional status.

3. Scheduling Exceptions
   a. Onsite evaluations must be conducted earlier than normal scheduling requirements when:
      - Significant changes have occurred in management, process(es), or product(s) that may require evaluation to ensure the participant is maintaining a NV-VPP quality safety and health management system.
      - SCATS has learned of significant problems, such as increasing injury and illness rates, serious deficiencies described in the participant’s annual evaluation of its safety and health management system, or deficiencies discovered through NVOSHA enforcement activity resulting from an employee complaint, fatality, catastrophe, or other event.
   b. An onsite evaluation may be conducted earlier when requested by a participant.

B. ARRANGEMENTS WITH THE APPLICANT/PARTICIPANT - Arrangements for the onsite evaluation must be coordinated by the Team Leader, who must contact the applicant or participant (site representative) to:

1. Set the date for the onsite evaluation and explain the onsite evaluation process.

2. Inform the site representative of the documents that must be reviewed by the onsite evaluation team. OSHA 300 logs may be requested in advance of the onsite evaluation, if appropriate.

3. SCATS must inform the employer if a Special Government Employee (SGE) will be used as a member of the onsite evaluation team. The employer must agree with this arrangement.
4. **Employee Representation** - Where collective bargaining agents are involved, the team leader must tell the site representative that such agents must be included in the initial and closing conferences and allowed the opportunity to accompany the onsite evaluation team on the worksite walkthrough. Similar employee involvement must be encouraged at non-collective bargaining worksites.

5. **Medical Access Order (MAO)** - SCATS must prepare and submit a Medical Access Order (MAO) Request Form to the applicant. SCATS must then direct the applicant or participant to post the MAO in a prominent place at the worksite for at least 15 working days prior to the onsite evaluation.

   If the applicant/participant did not receive the MAO prior to the onsite evaluation, the team leader must direct the applicant or participant to post a copy immediately after the opening conference. The posting must include a notice advising employees to inform management of any objection to their medical records being reviewed, in confidence, by NV-VPP employees.

C. **THE ONSITE EVALUATION TEAM**

1. **Team Composition** - Team composition is based on the size of the worksite and nature of the process, and must include at least (b) and (c) below. Applicants/participants who fall under the PSM Standard must also include (d).

   a. Team Leader
   
   b. Safety Specialist
   
   c. Industrial Hygienist
   
   d. Consultant with PSM experience
   
   e. Backup Team Leader
   
   f. Additional Safety or Health Specialists, including others with knowledge and skills appropriate to the worksite
   
   g. Special Government Employees (SGEs) - Refer to the latest SGE Policies and Procedures Manual for guidance on selecting, requesting, and utilizing SGEs.

2. **Selection of the Team** - The Consultation Supervisors will select the team.

   a. **Basic Qualifications** - All team members must have at least the following:

      - Thorough knowledge of NV-VPP policy
      - OSHA Course 5450, Special Government Employee Training Course (for SGEs personnel only)
      - Working knowledge and understanding of safety and health management systems
      - In addition, one person (not including SGEs) on the team must have a safety and health job classification, for example, Industrial Hygienist.

   b. **Team Leader** - The team leader must have a minimum of two years experience in consultation and recognition program inspection experience (SHARP, VPP).
3. Preparing the Onsite Evaluation Team
   a. **In Advance** - The team leader must supply the team with the following information in advance of arrival at the worksite to be evaluated.
      - **VPP History** - For new applicants, team members must be given relevant sections of the application and the most recent self-evaluation. For current participants, team members must be given a copy of the participant’s last onsite evaluation report. Ensure that any 1-Year Conditional goals to be evaluated are provided.
      - **Inspection History** - Team members must be given the inspection history and a summary of past interactions between the applicant and NVOSHA.
      - **Any Documents Obtained with the Application** - If any records were submitted in advance of the onsite evaluation, these should be shared with team members.
      - **PSM Application Supplement and/or PSM Questionnaire**, where applicable.
   b. **Preparation Required of Onsite Evaluation Team Members** - In advance of the onsite evaluation, team members must prepare in the following ways:
      - **Review** - When feasible, team members must carefully review the application and any previous onsite evaluation reports.
      - **Onsite Evaluation Report Format** - Team members must familiarize themselves with the onsite evaluation report format to ensure they understand what information they will be responsible for obtaining during the onsite evaluation. [See Appendixes D and E]
      - **Interview Questions** - Team members must carefully review the interview questions in preparation for conducting onsite interviews. [See Appendix F]
      - **Personal Protective Equipment (PPE)** - Team members must equip themselves with any PPE, such as safety shoes and safety glasses, required for the onsite evaluation (unless they have been informed that PPE will be provided).
   c. **Onsite** - Once the team has arrived at the location, the team leader must hold a strategy meeting with all team members to prepare the team for the onsite evaluation and to make assignments.

III. **CONDUCTING THE ONSITE EVALUATION** - This Section describes the standard onsite evaluation process and, at E. below, provides an alternative onsite evaluation protocol for qualifying participants seeking reapproval. For all onsite evaluations, the three primary methods of evaluation are document review, walkthrough, and interviews. Additional activities that must occur are the opening conference, daily briefings, report preparation, and closing conference.

Onsite evaluations include an evaluation of each element and sub-element of the applicant/participant’s safety and health management system (see Chapter 3) by following the procedures in Section III. A-D below. At the conclusion of the onsite evaluation, the onsite evaluation team must provide the SCATS CAO with its recommendation, that is, the
applicant/participant’s suitability for participation or continued participation in NV-VPP.

For current NV-VPP participants who demonstrate a sustained commitment to safety and health excellence, as described in section III.E, below, NV-VPP may choose to employ a Compressed Reapproval Process to Recognize Sustained Excellence (CRP) onsite evaluation. At the conclusion of the CRP, the onsite evaluation team must provide the CAO with its recommendation, that is, the participant’s suitability for continued participation in NV-VPP.

A. OPENING CONFERENCE - The opening conference with the employer and employee representatives will set the stage for the onsite evaluation, letting everyone know what to expect and what assistance the team will need. During this session, the onsite evaluation team should be able to get a sense of the extent of commitment that exists at the worksite.

The team leader must convey the following information:

1. **Purpose** - Clearly state the purpose of the onsite evaluation.

2. **Full Disclosure** - Indicate that the onsite evaluation team expects the applicant/participant will adhere to the signed full disclosure assurances submitted with the application.

3. **Schedule** - Outline the schedule for the onsite evaluation.

4. **Interviews** - State that arrangements must be made to conduct private interviews with supervisors, union representative(s), maintenance personnel, recordkeepers, occupational health staff, and randomly selected employees, including contractor employees (if any).

5. **Responding to Hazards** - Explain the differences between the walkthrough and an enforcement or consultation visit, as well as the hazard correction requirements detailed in V., below.

6. **Status** - Explain how the onsite evaluation team will keep the site representative updated daily on the progress of the onsite evaluation. When the onsite evaluation is completed, the NV-VPP onsite evaluation team will discuss its findings with the site representative so that the recommendations are clearly understood.

7. **Employee Rights** - Outline the rights of employees under the NVOSH Act.

B. DOCUMENT REVIEW - The applicant/participant written safety and health management system must describe how each of the requirements outlined in Chapter 3 are being met. The documents listed below are part of the written safety and health management system. The documentation of the system must be site specific. On a case-by-case basis for small businesses, some documentation need not be in writing, if all employees have the same clear understanding of the particular policy. This will be verified by the onsite evaluation team.

1. **Injury/Illness Data** - The following documents must be reviewed to verify that the applicant/participant is properly and accurately recording injuries and illnesses.

   a. **Summary of Occupational Injuries and Illnesses**
      
      - Review data for the most recent complete 3-year period, current year-to-date, and for any applicable contractors.
• Recalculate the total case incidence rate (TCIR) and the days away, restricted, and/or transfer case incidence rate (DART rate) using the instructions found in Appendix A.

b. **Incentive Programs** - The review of incentive programs must focus on ensuring that any incentive programs in operation are not based on providing awards to employees for the reduction or absence of safety or health incidents. Instead, these programs should be innovative, positive, and promote safety awareness and employee participation in safety-related activities. The onsite evaluation will focus on the incentive program’s potential impact on the accuracy of reporting, injury, and illnesses data.

c. **First Reports of Injury**

d. **Accident and Near-Miss Investigation Reports** - Verify that all accidents and near-misses are properly reported and investigated, and that all injuries and illnesses resulting from an accident are properly recorded.

e. **First-Aid Reports** - Verify that the first-aid incidents are properly categorized as such, and are not causing possible over-reporting.

f. Team-selected medical surveillance reports, such as audiometric testing records, respirator fit test records, etc. [See II.B5 above]

g. Any cause for under- or over-reporting, such as lack of training in OSHA recordkeeping requirements, an incentive program, misdiagnosis of an injury or illness, etc., must be addressed. Discuss any discrepancies or omissions with the recordkeeper. Determine corrective actions, and recalculate the 3-year TCIR and DART rate, if necessary.

2. **Management Leadership**

a. Management’s statement of commitment to safety and health

b. Written goals and objectives for safety and health

c. Annual safety and health evaluation

d. Job descriptions

e. Performance standards and appraisals (these reviews must be performed in a manner that protects confidentiality and anonymity).

f. Resource documents including budget projections.

3. **Employee Involvement**

a. Safety and health committee minutes and attendance records, if applicable

b. Self-inspection forms and records, accident investigations, hazard analyses, and employee reports of hazards

c. Documents attesting to union support, if applicable.

4. **Worksite Analysis**

a. Baseline safety and industrial hygiene surveys
b. Self-inspection forms and records

c. Health hazard assessment and monitoring records (such as industrial hygiene surveys, sampling results, exposure calculations, and summary reports)

d. Hazard analysis forms and reports

e. Accident/incident investigations to verify that all causes of an accident/incident are identified, undue blame, or reprisal is not placed on employees, and recommendations for preventing future occurrences are listed.

f. Hazard reporting system for employees

g. Annual safety and health management system evaluations, worksite audits, and when needed to demonstrate that NV-VPP criteria are being met, corporate audits that an applicant/participant voluntarily chooses to provide in support of its application.

h. The system for managing contractor safety and health, and related documents

i. Trends analysis reports of injury/illness, accidents, employee hazard reports, etc.

5. Hazard Prevention and Control

a. Hazard control programs required by OSHA standards (such as Lockout/Tagout, Hazard Communication, Respiratory Protection, Process Safety Management, Bloodborne Pathogens, Confined Space Entry, Emergency Response, etc.).

b. Preventive maintenance program, maintenance schedule, and examples of work orders

c. Engineering studies to verify that any over-exposures to health hazards were adequately addressed and controlled following the hierarchy of controls.

d. Hazard correction/work order and tracking reports

e. Safety rules, examples of safe work procedures and practices.

f. Disciplinary system, including a review of policy

6. Training

a. New employee and contractor orientation curricula.

b. Training curricula related to required NVOSHA and OSHA standards.

c. Additional safety and health training curricula to verify that personnel performing hazard analysis and accident investigation are trained to do so. Also to verify that information from hazard analysis, accident reports, etc., are incorporated into training.

d. Training attendance records and tracking method.

7. Any other related documents that support and verify that NV-VPP requirements are being met.
C. WALKTHROUGH

1. **Scope** - The onsite evaluation team must walk through the worksite to understand the type of work performed and to gain a sense of overall work conditions. An orientation tour is conducted with the entire onsite evaluation team on the first day of the onsite evaluation. The remainder of the onsite evaluation must include a walkthrough of the entire worksite, unless the size of the worksite or nature of the process does not allow for it, in which case a representative sampling of all major operating areas and supporting activities must be covered.
   a. **Contractors** - The onsite evaluation team must review areas where work is performed by contract employees to ensure that they are provided equally effective protection.
   b. **Hazard Analysis** - The safety and health specialists must examine the worksite in sufficient detail to understand the types of hazards that exist and to determine that such hazards are controlled systematically by the safety and health management system.
   c. **Problem Areas** - The onsite evaluation team must examine areas where site reports of the following indicate that uncontrolled hazards may be present: Baseline hazard analysis.
      - Trends in injuries or illnesses
      - Employee complaints or concerns
      - Recurring accidents
      - Health hazard surveys
      - Self-inspections
   d. **Informal Interviews** - During the walkthrough (and at other times, as appropriate) the onsite evaluation team must question randomly selected employees (including contract employees) privately at their workstations about prescribed work procedures, hazards to which they may be exposed, and their knowledge of how to protect themselves from hazards, including how to use and maintain their personal protective equipment. The team must keep track of the number of employees interviewed, but employee names and addresses must not be recorded. [See Appendix F]

2. **General Industry Safety and Health Review** - The safety specialist and industrial hygienist must:
   a. Follow the process flow where possible. Focus on areas where document review and/or interviews indicate that uncontrolled safety and health hazards may be present.
   b. Look for evidence that hazards are appropriately controlled following the hierarchy of controls.
c. Identify and note any uncontrolled hazards that must be corrected. Ensure that a responsible member of management take notes, as well, and agrees on a reasonable period of time for correction.

d. If uncontrolled hazards are present, determine the causative deficiencies in the safety and health management system.

e. Relate hazards seen in the work areas to safety and health management system improvements that would control the hazards and prevent recurrence.

f. Inform the team leader of findings at the end of each day.

3. **Construction work** - The safety specialist and industrial hygienist must follow the procedures above and make every attempt to view all areas of construction covered by the application. If the entire worksite is not viewed, ensure that all types of construction work in progress are seen.

4. **Process Safety Review** - A process safety review is required at all worksites producing or using highly hazardous chemicals. The review must be conducted in accordance with the Process Safety Management (PSM) Directive by a PSM “Level 1” Auditor (or SGE equivalent), who must select one or more complete processes and follow the process flow. Elements of the review should include:

   a. Review process hazard analysis and operating procedures.

   b. Check process lines as necessary to verify documented system protection.

   c. Ask questions concerning system failure procedures during informal interviews with appropriate operator, maintenance, and contract personnel.

   d. Review training records.

   e. Look for evidence that all considerations have been addressed and that management has identified and is controlling all hazards and potential releases.

   f. Verify the answers provided by the applicant/participant to the questions found in the PSM application supplement that are most appropriate to the facility’s operations (new approvals only).

   g. Ask and verify answers for the questions from recent Dynamic Inspection Priority Lists that are most appropriate to the facility’s operations.

D. **INTERVIEWS**

1. **Formal Interviews** - Private formal interviews are conducted in a private area away from the workstation to ascertain the extent of safety and health involvement and program awareness of managers, supervisors, employees, and contractors.

2. **Informal Interviews** - Informal interviews are conducted at employees’ workstations during the walkthrough and at other times, as appropriate. [See C.1.d., above]

3. **Persons to Be Interviewed**

   a. **Managers** - A representative number of managers must be interviewed to ascertain the depth of management leadership in the safety and health management system.

   b. **Supervisors** - A representative number of supervisors must be interviewed.
c. **Line Employees** - Conduct employee interviews with those individuals involved in the actual process or production at the worksite to verify aspects of the safety and health management system.

d. **Occupational Health Care Professionals**

e. **Maintenance Personnel** - Maintenance personnel should be interviewed. At chemical plants making or using highly hazardous chemicals, they must be interviewed.

f. **Recordkeepers** - The person responsible for keeping injury and illness records must be interviewed to ensure that records are properly kept and that the recordkeeper understands the requirements and interpretations.

g. **PSM Coordinator (or equivalent)** - A person responsible for overseeing PSM processes on site.

h. **Contract Employees (NRS 618.383(7))**

   - **Temporary Employees** - Temporary employees who are supervised by the applicant company's employees must be selected for formal interviews to establish the quality of safety and health protection afforded them.

   - **Other Contract Employees** - Contract employees who work under their own company's supervision must be interviewed to determine whether they are aware of all the hazards to which they are exposed, and whether they are protected by a safety and health management system equal in quality to the applicant. Representatives from each craft should be interviewed, where possible.

4. **Selecting Persons to be Interviewed** - The selection of persons to be interviewed must be made by the onsite evaluation team, not by the employer. The team must be flexible in choosing the most reasonable method of selection, given the characteristics of the worksite and any concerns expressed by the employer. Methods for selecting employees for interviews include:

   a. Identifying the most hazardous areas, selecting employees at random from those areas, and conducting informal interviews in these areas during the walk around.

   b. For formal interviews, the team leader may select appropriate employees at random from an employee roster or using a random selection protocol.

5. **Scheduling Formal Interviews** - Formal interviews lasting at least 15 minutes must be conducted in a manner that minimizes disruption. The number of formal interviews is up to the team leader, based upon the size and nature of the worksite and whether a new applicant or current participant is being evaluated.

6. **Use of Interview Questions**

   a. The reviewers must assure each interviewee that responses will be treated confidentially, and that no single answer they give will influence the team's recommendation. [See Appendix F for suggested interview questions.]
b. Notes (without names or addresses) should be made of employees’ responses to interview questions and other comments. These notes later will be used to support the team’s recommendation and SCATS decision.

E. COMPRESSED REAPPROVAL PROCESS TO RECOGNIZE SUSTAINED EXCELLENCE (CRP) - For Star participants seeking continued participation and meeting all requirements detailed in 1. below, NV-VPP may choose to employ a CRP evaluation.

1. Eligibility Requirements - To qualify for a CRP evaluation, the participant must meet each of the following requirements and conditions:
   a. The participant is in compliance with all Assurances as described in Chapter 4, Section I.B.1
   b. The participant’s most recent Annual Evaluation was complete and demonstrated NV-VPP quality safety and health excellence.
   c. The participant must be in good standing at the Star level, that is, cannot be Star Conditional or under a Rate Reduction Plan.
   d. The participant has experienced no work-related fatalities or catastrophes since the most recent NV-VPP onsite evaluation.
   e. The participant has not received willful, repeat, or high gravity serious citations since the most recent NV-VPP onsite evaluation.

2. Additional Eligibility Requirements - To qualify for a CRP evaluation, the participant also must meet each of the following requirements and conditions. However, these involve a judgment SCATS that may disqualify the participant for a CRP.
   a. The participant’s most recent 3-year injury and illness rates (TCIR and DART) must meet Star requirements. However, SCATS may determine that irregularities within rates that otherwise meet this requirement (for example, rates that trend up) warrant a comprehensive onsite evaluation.
   b. The SCATS determines that the participant’s NVOSHA complaint history and findings since its most recent NV-VPP onsite evaluation do not indicate the need for a comprehensive onsite evaluation. In making this determination, SCATS will consider the participant’s size, complexity, and work culture.
   c. The participant has notified NV-VPP of changes in management, ownership, or bargaining unit status in accordance with the Assurance described in Chapter 4, Section I.B.1.j. SCATS determines that the changes do not warrant a comprehensive onsite evaluation.

3. Notification - The onsite evaluation Team Leader will notify the participant of NV-VPP’s decision to perform a CRP when making arrangements to perform the evaluation. The Team Leader will also inform the participant that the CRP may be expanded into a comprehensive onsite evaluation if more information is required to make a decision regarding continued NV-VPP participation.

4. Scope - In general, the conduct of a CRP evaluation will parallel the standard onsite evaluation delineated in this Section’s first paragraph and A-D, above, except:
a. **Opening/Closing Conference** - The Opening and Closing Conferences should focus on changes since the most recent NV-VPP onsite evaluation and the information covered in the most recent annual evaluation.

b. **Document Review** - The review of the participant’s written safety and health management system should focus on new and changed policies and procedures and highly hazardous operations (e.g., LOTO, Confined Space, PSM).

c. **Site Walkthrough**
   - The CRP evaluation must include a walkthrough of the entire worksite that pays special attention to any changes in equipment, process flow, and/or operating procedures.
   - For participants who produce or use highly hazardous chemicals, as defined in OSHA’s Process Safety Management (PSM) regulations, a process safety review must be conducted by a team member qualified to evaluate PSM in accordance with NV-VPP procedures. The findings of this review must be included on the Onsite Evaluation Worksheet.

d. **Employee/Management Interviews** - The emphasis should be on conducting informal interviews. Formal interviews should still be conducted with key personnel (e.g., site manager, recordkeepers, union stewards) as well as some employees.

5. **Documenting the Onsite Evaluation** - Only the NV-VPP elements identified as well as PSM, where applicable, need to be reviewed and documented in the Onsite Evaluation Worksheet. Where appropriate, documentation should mention highly hazardous operations (e.g., LOTO, Confined Space) and new/changed elements within the participant’s safety and health management system.

6. **Switching from the CRP to the Standard Evaluation Process** - The onsite Team Leader may decide to switch from the CRP to the standard evaluation process (as described in Sections A-D above) if more information is needed to make a decision regarding a participant’s continued participation in NV-VPP. The Team Leader should inform both the NV-VPP Manager and SCATS CAO and the participant of this decision.

IV. **DISCUSSION OF FINDINGS**

A. **DAILY DEBRIEFINGS** - At the end of each day, the onsite evaluation team must meet privately to discuss members’ findings. The team leader is responsible for organizing the findings and conducting daily briefings with the management and employees.

B. **UNCONTROLLED HAZARDS**
   1. **Informing Management** - As hazards are found and discussed during the walkthrough, the onsite evaluation team must add them to a written list of the uncontrolled hazards identified. This list will be used when the team briefs management at the end of the day.
   2. **Hazard Correction** - NV-VPP expects that every effort will be made by the applicant/participant to correct identified hazards before the closing conference. If
hazard correction cannot be accomplished before the conclusion of the onsite evaluation, the onsite evaluation team and management must discuss and agree upon correction methods and time frames.

a. **90-Day Items** - The applicant/participant may be given a maximum of 90 days to correct uncontrolled hazards, as long as interim protection is provided. These “90-day Items” must be corrected before the final onsite evaluation report can be processed.

Management must provide the team leader with a signed letter indicating how and when the correction will be made. The team leader may decide to return to the worksite to verify the correction.

b. If after repeated attempts to reach agreement, management refuses to correct a situation that endangers the safety and health of employees, that situation must be referred to the SCATS CAO for review and referral for enforcement action, if necessary.

C. **DEFICIENCIES IN THE SAFETY AND HEALTH MANAGEMENT SYSTEM** - Where the team detects deficiencies in the safety and health management system, even when physical hazards are not present, the onsite evaluation team must document these deficiencies as goals for correction, recommendations for improvement, or both.

1. **Goals** - If the system deficiency is a requirement for NV-VPP at the Star level, it must become the subject of a goal (1-Year Conditional). Implementation of goals is mandatory for NV-VPP participation. Time frames, interim protection, and methods of achieving goals must be discussed and agreed to with management.

2. **Recommendations** - If improvement of the system deficiency is not necessarily a requirement for NV-VPP, but will improve employee safety and health at the worksite, the improvement must be a recommendation. Implementation of recommendations is encouraged but is not mandatory for NV-VPP participation.

V. **FINAL ANALYSIS OF FINDINGS** - When the documentation review, the walkthrough, and employee interviews have been completed, the onsite evaluation team must meet privately to review and summarize its findings. The team leader must facilitate the discussion and assist the team members in drawing conclusions about the quality of the applicant/ participant’s safety and health management system, based on their findings.

A. In analyzing their findings, the onsite evaluation team must consider the following:

1. Observations made in the work areas.
2. The nature of injuries or illnesses recorded on the Summary of Occupational Injuries and Illnesses and reflected in the First Report of Injury data.
3. The degree to which implementation of written programs has been verified.
4. Responses to formal and informal interviews - The reviewer must look for an overall pattern in the perceptions of managers, supervisors, employees, and contract employees regarding worksite conditions and the safety and health management system. Employee responses that are supported by information obtained by document review, observation, or other employee interviews should carry the most weight.
5. When the applicant or participant is very small or in a low-hazard industry, some of the requirements for formality may be relaxed (for example, informal programs or scaled-down documentation), providing that a strong case can be made to support the effectiveness of the safety and health management system.

B. If the team’s analysis of findings fails to produce consensus on specific issues or the overall recommendation, the team leader should contact the SCATS CAO for guidance. This should occur before holding the closing conference and sharing the team findings and recommendation with the applicant/participant.

VI. RECOMMENDATIONS FOR FIRST-TIME PARTICIPATION - In the final private meeting prior to the closing conference, the onsite evaluation team must reach consensus on their recommendation for program participation.

General Applicants - Star - When the onsite evaluation team finds that an applicant’s safety and health management system meets all VPP requirements at Star quality, a recommendation for participation in the Star Program must be made.

Withdrawal of Application - The onsite evaluation team must recommend withdrawal of the application if the applicant does not meet the requirements for the Star Program.

VII. RECOMMENDATIONS FOR PARTICIPANTS - The onsite evaluation team must decide among the following recommendations:

A. STAR PARTICIPANTS

1. Recommendation for Star Reapproval - When the onsite evaluation team has judged that the participant’s safety and health management system continues to meet all Star Program requirements, the team must recommend reapproval to the Star Program upon satisfactory completion of any 90-day items.

2. Recommendation for 1-Year Conditional Participation in the Star Program - The onsite evaluation team must recommend conditional Star Program participation for 1 year (dating from the end of the 90-day deferral period) when the participant meets the conditions of both a. and b., below:

   a. The participant’s safety and health management system has fallen below Star quality in one or more safety and health management system requirements and those requirements can be satisfactorily met during a 90-day deferral of decision.

   b. 1-Year Conditional Goals - The team leader, with input from the team members and participant representatives, must establish goals to be accomplished in order for the participant to return to full Star status.

3. 3-year Rates Above the National Average.

<table>
<thead>
<tr>
<th>If:</th>
<th>Then:</th>
</tr>
</thead>
<tbody>
<tr>
<td>The participant’s 3-year rates are above the national average, and an onsite evaluation has been conducted.</td>
<td>The participant must be placed on 1-Year Conditional status. The SCATS CAO may also allow a 2-year rate reduction plan to provide the participant more time to reduce its rates to below the national average.</td>
</tr>
<tr>
<td>The participant’s 3-year rates are above the national average, and an onsite evaluation has not been conducted.</td>
<td>The participant must be placed on a 2-year rate reduction plan approved by the SCATS CAO.</td>
</tr>
</tbody>
</table>
In both cases, NV-VPP and the participant must determine the safety and health management system deficiencies related to the high rates. The 1-Year Conditional goals, rate reduction plans, or both must address the deficiencies, correction methods, and time frames. Quarterly reports to Program Coordinator are due during the year.

4. **Withdrawal** - The onsite evaluation team must recommend withdrawal from NV-VPP if a Star participant is deficient in one or more requirements and any of the following apply:
   a. Agreement cannot be reached on correction.
   b. Correction cannot be accomplished within a 90-day deferral of decision.
   c. The participant has not made good faith effort on agreed-upon corrections.

**B. 1-YEAR CONDITIONAL STAR PARTICIPANTS**

1. **Lifting of 1-Year Conditional Status** - If all 1-Year Conditional goals have been met and the safety and health management system has been restored to Star quality, then the onsite evaluation team must recommend lifting the 1-Year Conditional status and returning the participant to full Star Program participation.

2. **Withdrawal** - If not all of the 1-Year Conditional goals are met, the onsite evaluation team must recommend that the participant withdraw from the program.

**VIII. CLOSING CONFERENCE** - The findings of the onsite evaluation team, including its recommendation to the SCATS CAO, must be presented to management and appropriate employee representatives before the team leaves the worksite. During the closing conference, the team leader must review:

A. **FINDINGS** - Review the team’s findings, addressing each of the major NV-VPP elements as outlined in Chapter 3. Also, review the injury and illness rates and how they compare to the industry national average.

B. **THE ONSITE EVALUATION TEAM’S RECOMMENDATION TO THE SCATS CAO** - Discuss and support the onsite evaluation team’s recommendation to the SCATS CAO so that the applicant or participant has a clear idea of how it measures up to the requirements of NV-VPP.

C. **90-DAY ITEMS** - Review all uncorrected hazards, expected correction methods, and time frames.

D. **GOALS** - Review 1-Year Conditional goals and time frames for correction.

E. **RECOMMENDATIONS** - Review any recommendations made by the onsite evaluation team for improvement of the applicant/participant’s safety and health management system.

F. **RESPONSIBILITIES** - Remind the applicant/participant of its responsibilities under Chapter 4, Assurances, and Chapter 6, Withdrawal Process.

**IX. THE ONSITE EVALUATION REPORT**

A. **PURPOSE OF THE REPORT** - The onsite evaluation team must write a report documenting the onsite evaluation to substantiate the team’s recommendation to the SCATS CAO for approval or reapproval of the applicant/participant into NV-VPP. If the applicant/participant is approved or reapproved, the report and worksheet will become an
official record in the public file along with the application, and will provide baseline data for future evaluation purposes. The report must include the following information:

1. Verification of the application information submitted by an applicant
2. Documentation of the qualifications for participation

B. WRITING THE ONSITE EVALUATION REPORT - All attempts must be made to complete a draft report before leaving the worksite. The draft report must reflect the consensus of the onsite evaluation team. Each team member must complete the sections of the onsite evaluation report assigned by the team leader, following the format in Appendix D.

1. Review of the Draft Onsite Evaluation Report - Once the draft is complete, the team must review it and make any needed changes.
2. Presentation of the Draft Onsite Evaluation Report - If the draft onsite evaluation report is completed onsite; the draft must be presented at the closing conference. If the draft report is not presented at the time of the closing conference, the team leader must advise the applicant approximately when the draft report will be available for review.
3. Applicant/Participant’s Comments and Revised Draft Report - After the draft report is presented, the team leader must allow the applicant or participant 30 days to review and comment on the draft report. A revised version of the onsite evaluation report must be prepared by the team leader following receipt of the applicant/participant’s comments.

C. COMPLETING THE FINAL ONSITE EVALUATION REPORT - The team leader must compile the final report and submit it to the appropriate consultation supervisor for processing.

D. DEFERRAL OF FINAL ONSITE EVALUATION REPORT DUE TO UNCORRECTED HAZARDS - The final report may be deferred from submission if uncorrected hazards are still present at the worksite after the closing conference or after the team leaves the worksite.

E. DEFERRAL PERIOD - The final report may be deferred for up to 90 days from the closing conference or until the applicant/participant has corrected all uncontrolled hazards identified by the onsite evaluation team, whichever occurs first.

X. CORRECTION OF REMAINING HAZARDS

A. HAZARD CORRECTION PLAN - Within a week of the closing conference, the applicant/participant must document in a letter to the SCATS or his/her designees any hazard correction plans (this can be the list of 90-day items) and dates that have been agreed to. This letter will be kept on file until a correction letter is received.

B. VERIFICATION OF HAZARD CORRECTION

1. When the applicant/participant has corrected the hazards, it must send a signed letter to the SCATS indicating how and when the corrections were made.
2. The team leader or SCATS CAO may decide to conduct a return visit to verify the corrections. The findings of this visit must be written in a correction letter and kept on
file. The correction letter may be made available to an onsite evaluation team at a later date.

C. **FINALIZING THE ONSITE EVALUATION** - When hazard correction has been verified, the team leader must remove any lists of uncorrected hazards from the final report before submitting the report to the SCATS CAO.

D. **FAILURE TO CORRECT HAZARDS BY END OF DEFERRAL PERIOD** - If the deferral period has expired, the applicant/participant has not corrected the hazards, and the SCATS CAO has made every attempt to resolve the problem in a manner consistent with the cooperative spirit of the NV-VPP, then the applicant or participant will be withdrawal or terminated. Refer to Chapter 6, VIII.
Chapter 6
PARTICIPATION DECISIONS AND MANAGEMENT

I. REPORT PROCESSING - After an onsite evaluation has been conducted and the onsite evaluation report has been completed, it must coordinate clearance of the report through the SCATS CAO.

FINAL DECISION ON PARTICIPATION - All decisions are based on the onsite evaluation, final evaluation report, and recommendations.

1. In each of the following cases, the evaluation team must recommend an action to the SCATS CAO, and the CAO must decide on the course of action regarding:
   a. Approval of new participants
   b. Lifting of a Star participant’s 1-Year Conditional status
   c. Withdrawal or termination of participation

2. In each of the following cases the SCATS CAO and the DIR Administrator has responsibility to:
   a. Reapprove (or not approve) participation in the Star program
   b. Place a Star participant on 1-Year Conditional status.

II. FINAL ONSITE EVALUATION REPORT AND PARTICIPATION DATE - When the final onsite evaluation report is sent to the applicant/participant with the CAO’s and DIR Administrator’s letter announcing the participation decision, approval becomes final.

A. For new approvals, lifting of a Star participant’s 1-Year Conditional status, the effective date is the date the DIR Administrator’s approval letter is signed.

B. For reapprovals, or placing a Star participant in 1-Year Conditional Star status, the effective date is the date the DIR Administrator’s approval letter is signed.

III. NOTIFICATION

A. When the DIR Administrator’s approval or congratulatory letter is signed, the NV-VPP Manager must immediately mail the letter and the final onsite evaluation report to the participant. This mailing constitutes official notification that the participant has been approved for participation in VPP.

B. As a courtesy, inform the company of the approval and its effective date.

C. Inform the applicant/participant that an official letter of approval or congratulations will be sent by mail immediately, and that the award plaque and flag will be available in approximately 1 month.

D. Inform the applicant/participant that an award ceremony may be held and that the DIR Administrator or the highest level State representative may be requested to make a formal presentation.
IV. **AWARD PLAQUES AND FLAGS** - NV-VPP awards newly approved participants a plaque and flag. Reapproved Star participants who have not already received the plaque redesigned in 2007 (and containing reapproval plates) are awarded a plaque.

A. **PLAQUES** - It is the NV-VPP Manager responsibility to arrange for the ordering and awarding of plaques.

1. NV-VPP will present to all new Star participants a personalized plaque measuring 15” x 12” that recognizes the initial achievement on a main plate, and also includes 10 small screw-on plates to commemorate subsequent reapprovals. Following each Star approval, the NV-VPP Manager should inform the participant that it is entitled to engrave the reapproval date onto one of the small plates. No other information should be included on the reapproval plates. Engraving the small plates is the responsibility of the participant.

2. Upon reapproval, NV-VPP will present the 15” x 12” Star plaque with reapproval plates to any participant who has not received this plaque previously. This provision is expected to be applicable through calendar year 2012, by which time all active Star participants should have received the 2007 version of the NV-VPP plaque.

B. **FLAGS** - SCATS awards participants newly approved to a program a flag appropriate to that program. The NV-VPP Manager must maintain an inventory of flags.

V. **APPROVAL CEREMONIES** - Upon notification of approval, a site representative should contact the NV-VPP Manager to schedule the ceremony.

A. The SCATS CAO, DIR Administrator or the highest level State representative available must make the presentation.

B. The participant may send an invitation to the appropriate office personnel who were responsible for recruiting the participant for VPP, as well as higher level NV-VPP or SCATS/DIR officials. The onsite team may also be included on the invitation list. In addition, the SCATS should suggest other potential invitees such as local political officials, other area companies that might be potential NV-VPP candidates, and local NV-VPP liaison.

C. The NV-VPP participant may consult the NV-VPP staff for assistance with any press releases, and the NV-VPP Manager should give the company names and telephone numbers of other NV-VPP participants that have had good media coverage.

D. The SCATS CAO office is strongly encouraged to issue a press release.

VI. **WITHDRAWAL** - Participants may withdraw of their own accord or may be asked by SCATS to withdraw from NV-VPP. In either case, SCATS must determine the cause of withdrawal and notify the SCATS CAO of the reason and date of withdrawal.

A. **PARTICIPANT DECIDES TO WITHDRAW** - Any participant may choose to withdraw at any time after approval, following the procedures in C. below.

B. **NV-VPP REQUESTS WITHDRAWAL**

1. NV-VPP must request that a participant withdraw from NV-VPP if it is determined that the participant is no longer meeting the requirements for NV-VPP participation.
2. **When a Participant's Location Changes**
   
   a. If 75 percent or more of the employees remain with the employer, and NV-VPP jurisdiction remains the same, then the participant can maintain its NV-VPP status, but must:
      
      - Submit a new letter of management commitment.
      - Submit a new self-evaluation including a comprehensive baseline hazard analysis
      - Receive a satisfactory NV-VPP onsite evaluation within 12 months (6 months is preferred).
   
   b. If fewer than 75 percent of the employees remain with the employer and/or the new location is under a different State or Federal jurisdiction, then the participant must withdraw and reapply.

C. **WITHDRAWAL PROCESS** - The participant must write a letter addressed to the SCATS CAO and to the attention of the NV-VPP Manager, stating that it is withdrawing from the program, with the reasons for withdrawal, effective on the date of the letter.

   The NV-VPP Manager must send the participant a letter acknowledging the withdrawal, with a copy to the SCATS CAO. The letter must also state:

   1. That the NV-VPP flag and plaque are invalid and must no longer be used. That the company’s application, onsite evaluation reports, approval letters, and annual evaluations will be removed from the public file.
   2. That the establishment must be returned to the programmed inspection list, if applicable, at the time of the next inspection cycle.
   3. That NV-VPP will consider a reapplication to NV-VPP if and when eligibility requirements are met. [See VIII below.]

VII. **TERMINATION** - NV-VPP may terminate a participant from the NV-VPP for failure to maintain the requirements of the program. Except where employees appear to be at serious risk, termination by NV-VPP must occur only when all efforts for assistance have been exhausted. An example is when NV-VPP has identified one or more serious problems and recommended technologically feasible solutions, but the participant has refused.

   Termination may also occur when evidence exists that the trust and cooperation among labor, management, and NV-VPP, upon which approval was based, no longer exist, or when NV-VPP requests a participant to withdraw and it does not.

   Other possible reasons for NV-VPP participation ending include: construction work has been completed; or resident contractor participation is no longer possible because the host no longer participates in NV-VPP. If a resident contractor leaves the hosting NV-VPP participant’s worksite, the resident contractor will no longer be in the NV-VPP.

   OSHA must handle the termination of a NV-VPP participant as follows:

   A. **NOTICE OF INTENT TO TERMINATE** - The NV-VPP Manager must notify the participant, and union representative(s) in writing of NV-VPP’s intent to terminate participation in the NV-VPP.
B. **APPEAL PROCESS** - The participant has 30 days from the receipt of the notice to appeal the intent to terminate. They must provide the SCATS CAO, through the NV-VPP Manager, in writing, the reasons why it should not be removed from the NV-VPP. Upon review of the participant’s justifications for continued participation, the SCATS CAO must make the final decision.

If the SCATS CAO finds the participant’s appeal valid, the participant may continue in NV-VPP.

VIII. **REINSTATMENT** - Reinstatement requires reapplication. See table below for time frames.

Chapter 7
ENFORCEMENT ACTIVITY AT NV-VPP WORKSITES

I. ADDITIONAL NV-VPP ASSESSMENT - This chapter describes the procedures followed by NV-VPP in the event of enforcement activity at a NV-VPP applicant or participant’s worksite. Two types of enforcement activity trigger additional NV-VPP assessment:

A. UNPROGRAMMED NVOSHA INSPECTIONS - Unprogrammed inspections occur in response to all referrals, formal complaints, fatalities, and catastrophes.

B. OTHER ACCIDENTS OR EVENTS - Other accidents or events, whether or not injuries or illnesses have occurred and whether or not normal enforcement procedures apply to the situation, may trigger reassessment. NV-VPP may reassess the participant’s safety and health management system if there is reason to believe that a serious deficiency exists that would have an impact on the participant’s continued qualification for NV-VPP.

II. NV-VPP ACTIVITY

A. If the event that triggers enforcement activity occurs during the time between application and onsite evaluation, the onsite evaluation must be postponed until the enforcement case is closed. If there already is an open enforcement case at a worksite when NVOSHA is notified by the NV-VPP Manager of a pending onsite evaluation, NVOSHA must inform the NV-VPP Manager of the enforcement activity so that the NV-VPP evaluation can be postponed.

B. If the event that triggers enforcement activity occurs during the time between the scheduling and the beginning of an onsite evaluation, the NV-VPP onsite visit must be postponed until the enforcement case is closed.

C. If the event that triggers enforcement activity occurs during the NV-VPP onsite evaluation, NV-VPP onsite team members must not switch to an enforcement capacity. They must contact the local District Office, and the NV-VPP onsite must cease until the enforcement case is closed.

III. INITIATION OF ENFORCEMENT ACTIVITY

A. When NVOSHA receives a complaint, a referral other than from the onsite team, or is notified of a fatality, catastrophe, or other event requiring enforcement occurring at a NV-VPP worksite, NVOSHA must initiate an inspection following normal enforcement procedures.

IV. When NVOSHA receives a referral from the NV-VPP onsite team, NVOSHA must notify the NV-VPP Manager who in turn will notify the participant and the SCATS CAO.

V. NOTIFICATION

A. NVOSHA must immediately notify the SCATS of any fatalities, catastrophes or other accidents, or incidents requiring enforcement that occurs at a NV-VPP VPP worksite, as
well as when a referral or complaint is received from a NV-VPP worksite, including informal complaints that receive responses by letter.

B. If SCATS is the first organization to be notified by the participant of an event requiring enforcement, the NV-VPP Manager must contact NVOSHA.

C. Fatalities, catastrophes, and accidents or incidents involving significant publicity: If the event is catastrophic in nature, involves a fatality or multiple fatalities, and/or is highly visible with press coverage, then it is appropriate to contact the SCATS CAO, who will notify the DIR Administrator. Press inquiries must be referred to the Division Public Information Officer.

1. Upon being informed of the event, the NV-VPP Manager must immediately provide a description of the event, by e-mail and/or telephone, to all of the following:
   a. The SCATS CAO
   b. DIR Administrator

2. The description of the fatality, catastrophe, or other significant event must include the following information:
   a. Participant name
   b. Current VPP status
   c. Number of years in VPP
   d. Last evaluation date
   e. Last approval date
   f. Date of event
   g. Involved parties (employee, contractor, or both)
   h. Nature of event if known
   i. OIS inspection number

3. As pertinent information relating to the event and its cause(s) becomes available, the NV-VPP Manager must update the SCATS CAO and the DIR Administrator.

VI. INSPECTION RESULTS - When enforcement activity is complete:

A. NVOSHA must send SCATS a copy of all reports resulting from enforcement activity.

B. SCATS must review any reports of investigations triggered by referrals, formal or non-formal complaints, or letters written by NVOSHA concerning conditions at the NV-VPP worksite, fatalities/catastrophes, and other accidents or incidents requiring enforcement or involving publicity.

C. The SCATS CAO must assess whether deficiencies in the participant’s safety and health management system led to the event and, if so, must use their professional judgment and discretion to determine one of the following courses of action:

1. In cases where there are no obvious systemic errors in the participant’s safety and health management system, the participant was cooperative with the investigation,
NVOSHA issued no willful violations, all cited hazards were abated, and NV-VPP elements continue to be in place, a phone call with the participant is sufficient to:

a. Obtain assurances that management and unions (if applicable) remain committed to NV-VPP.

b. Note any improvements in the participant’s systems, policies, procedures, and/or hazard controls.

c. Determine whether the participant remains qualified for NV-VPP participation.

2. In cases where there were minor systemic errors/failures in the participant’s safety and health management system or incorrect/ inappropriate hazard control(s) selected, and where there may or may not have been fatalities, the participant was cooperative with the investigation, NVOSHA issued no willful violations, and all cited hazards were abated, but where NV-VPP elements may not be in place, SCATS must visit the participant to:

a. Review conditions pertaining to the event.

b. Obtain assurances that management and unions (if applicable) remain committed to NV-VPP.

c. Determine if the participant remains qualified for NV-VPP participation.

3. In cases where the enforcement inspection leads to concerns about major failures in the participant’s safety and health management system, or a fatality or multiple fatalities occurred indicating that NV-VPP elements are not in place, or the participant is due for reapproval, an onsite evaluation must be conducted to:

a. Review all safety and health management system elements.

b. Obtain assurances that management and unions (if applicable) remain committed to NV-VPP.

c. Determine if the participant remains qualified for NV-VPP participation.

4. In cases where willful violations were issued and upheld, the participant’s participation will not automatically be terminated; however, SCATS will closely review the case. If it is obvious that the participant no longer meets the requirements of NV-VPP, then an onsite is not necessary, and procedures for withdrawal or termination outlined in Chapter 6 apply.

VII. DOCUMENTATION AND SUBMISSION OF ASSESSMENT – SCATS must prepare a report of findings as follows:

A. If a telephone interview or onsite visit was conducted in the case of VI.C.1 or 2 respectively, above, the verbal report to the DIR Administrator detailing the findings and recommendation for participation, withdrawal, or termination.

B. If an onsite evaluation was conducted in the case of VI.C.3, above:
VIII. DECISION TO CONTINUE PARTICIPATION OR RECOMMEND WITHDRAWAL OR TERMINATION

A. In the case of VI.C.1 or 2, above, the SCATS CAO may approve the participant’s continued participation. No further action is necessary. If the CAO decides that termination is required, the procedures in Chapter 6 must be followed.

B. In the case of VI.C.3, above, the SCATS CAO may approve the participant’s continued participation. No further action is necessary.

   1. If the SCATS CAO decides that termination is required, the procedures in Chapter 6 must be followed.

   2. If the SCATS CAO decides that the participant may continue its participation, the NV-VPP Manager will be notified. After being notified of the SCATS CAO’s decision, the NV-VPP Manager must:

      a. Notify the participant of the SCATS CAO’s decision, and no further action is necessary, or

      b. Reapprove the participant according to procedures in Chapter 6, if the purpose of the onsite was also to determine reapproval.

IX. CONFIDENTIALITY - Information gathered during the NV-VPP assessment cannot be used by NVOSHA for any enforcement activity at the worksite unless the worksite has refused to correct hazards found by the NV-VPP team, the team has recommended enforcement action, and the SCATS CAO has initiated such action.
APPENDIX A

INSTRUCTIONS FOR CALCULATING INJURY AND ILLNESS RATES

I. DEFINITIONS

A. Total Case Incidence Rate (TCIR) - Total number of recordable injuries and illness cases per 100 full-time employees that an applicant/participant has experienced in a given time frame.

B. Days Away, Restricted, and/or Transferred (DART) Case Incidence Rate - Number of recordable injuries and illness cases per 100 full-time employees resulting in days away from work, restricted work activity, and/or job transfer that an applicant/participant has experienced in a given time frame.

II. REVIEW OF RATES - New applicants and current participants are required to calculate annual rates and 3-year rates for the last 3 complete calendar years. Use information recorded in the OSHA 300 log.

NV-VPP onsite teams will calculate the applicant/participant’s rates for the previous 3 full calendar years and year-to-date. When reviewing participants, the NV-VPP onsite teams also will review the rates of each applicable contractor.

III. CONTRACTOR RATES

A. Copies of each applicable contractor’s hours worked and injury and illness data pertaining to the applicant/participant must be maintained by management. (See glossary for definition of applicable contractor).

B. Injury and illness data for temporary and contractor employees who are regularly intermingled with the owner’s employees and under direct supervision by management must be included in the applicant/participant’s rates.

IV. RATE CALCULATIONS

A. Annual rates are calculated by the formula (N/EH) x 200,000 where:

\[
N = \text{Sum of the number of recordable injuries and illnesses in the year.}
\]

For the TCIR use the total number of injuries plus illnesses.

For the DART rate use injuries and illnesses resulting in days away from work, restricted work activity, and/or job transfer.

\[
EH = \text{total number of hours worked by all employees in the year, including temporary employees and contractors directly supervised by applicant/participant.}
\]

200,000 = equivalent of 100 full-time employees working 40 hours per week, 50 weeks per year.
B. **3-YEAR TCIR CALCULATION** - To calculate 3-year TCIR, add the number of all recordable injuries and illnesses for the past 3 years, and divide by total hours worked for those years. Multiply the result by 200,000.

\[
\frac{[(\text{#inj} + \text{#ill}) + (\text{#inj} + \text{#ill}) + (\text{#inj} + \text{#ill})]}{\text{hours} + \text{hours} + \text{hours}} \times 200,000
\]

C. **3-YEAR DART RATE CALCULATION** - To calculate 3-year DART rates, use the same formula as in B. above, except add the number of all recordable injuries and illnesses resulting in days away from work, restricted work activity, and/or job transfer for the past 3 years.

\[
\frac{[(\text{#DART inj} + \text{ill}) + (\text{#DART inj} + \text{ill}) + (\text{#DART inj} + \text{ill})]}{\text{hours} + \text{hours} + \text{hours}} \times 200,000
\]

D. **ROUNDS INSTRUCTIONS** - You must round the rates to the nearest tenth following traditional mathematical rounding rules. For example, round 5.88 up to 5.9; round 5.82 down to 5.8; round 5.85 up to 5.9.

V. **COMPARISON TO NATIONAL AVERAGES** - Compare the 3-year TCIR and DART rate to any one of the three most recent years of specific industry national averages for nonfatal injuries and illnesses at the most precise level published by the Bureau of Labor Statistics (BLS).

A. These national averages, currently broken down by NAICS code, are found in the Table of Incidence Rates of Non-fatal Occupational Injuries and Illnesses by Industry of the BLS Occupational Injuries and Illnesses Bulletin that BLS publishes each year.

B. To calculate the percent above or below the national average, do the following:

\[
\frac{\text{Site rate} - \text{BLS rate}}{\text{BLS rate}} \times 100
\]

VI. **ALTERNATIVE CALCULATION FOR SMALL WORKSITES**

A. An alternative rate calculation is available to worksites where a single or relatively small number of incidences would cause the worksite’s disqualification when using the normal 3-year rate calculation.

B. If the following criteria are met, the TCIR and DART rate calculations can be based on the best 3 out of the most recent 4 complete calendar years’ injury and illness incidence experience.

1. Using the most recent calendar year’s hours worked, calculate a hypothetical TCIR assuming that the employer had two cases for the year.

2. Compare the hypothetical rate to the 3 most recently published years of BLS combined injury/illness Total Case Incidence Rates for the industry.

3. If the hypothetical rate is equal to or higher than the BLS rate in at least 1 of the 3 years, the employer qualifies for the alternative rate calculation method.
The following tables may be used in calculating rates and comparing them to the national averages. A separate Table 2 should be used for each applicable contractor, and the information should pertain to the worksite experience only, not the contractor’s entire company.

APPENDIX B

FORMAT FOR ANNUAL SUBMISSIONS

Participation in the NV-VPP requires each participant to annually evaluate the effectiveness of its safety and health management system. The evaluation must include assessments of the effectiveness of all elements and sub-elements of the participant’s safety and health management system. See Chapter 3 of this Instruction for a complete description of the elements and sub-elements of a safety and health management system.

The most comprehensive evaluation includes reviewing written programs, walking through the workplace, and interviewing employees. During this process participants should be answering the following questions relating to each element and sub-element of their safety and health management system:

1. Is it comprehensive?
2. Is it operating effectively and meeting established goals and objectives?
3. What improvements can be made to make it even more effective?
4. What goal modifications should be made for the upcoming year?

A self-evaluation is not a compliance audit. It is a critical review of all of the elements of the safety and health management system, including a review of participant and applicable contractors’ injury and illness data and trends.

The NV-VPP revisions require program participants to submit their annual evaluation to their Program Coordinator by February 15 of each year. NV-VPP expects the evaluation to include participant and applicable contractors’ injury and illness data, progress towards 1-Year Conditional goals (if applicable), and success stories. NV-VPP uses the information to update records and statistics, to showcase successes related to implementation of the NV-VPP requirements, and to demonstrate that participants are committed to continuously improving employee safety and health at their facilities.

Additionally, participants that fall under OSHA’s Process Safety Management (PSM) standard must provide responses to all applicable questions found in the PSM Questionnaire. The responses must cover all PSM operations at the site.

The following is a suggested format.

* Enter Average Employment figure as recorded in worksite’s own records. **Obtain from tables in Section B below. If you have more than one applicable contractor or union, copy and attach additional summary sheets.

SECTION B: INJURY & ILLNESS RATE INFORMATION

Please copy and submit separate tables (example below) for:

1) All site employees including temporary and contract employees who are directly supervised by site management,

2) Each applicable contractor’s employees (contractor whose employees worked 1,000 hours or more in any calendar quarter). Report contractor injury and illness experience only for work at your site.
Recordable Non-fatal Injury and Illness Case Incidence Rates

</tr>
</tbody>
</table>

- **column 2:** Insert the total person hours worked for the year (not an estimate).
- **column 3:** Insert the total number of OSHA recordable injuries and illnesses for the year.
- **column 4:** \( \frac{\text{total recordable non-fatal injuries and illnesses}}{\text{total hours worked}} \times 200,000 \)
- **column 5:** Insert the total number of OSHA recordable injuries and illnesses involving days away from work, restricted work activity, and/or job transfer.
- **column 6:** \( \frac{\text{total recordable non-fatal injuries and illnesses resulting in days away, restricted work activity, and/or job transfer}}{\text{total hours worked}} \times 200,000 \)

**BLS data:** Insert the TCIR and DART rates for your industry from BLS’s Table of Incidence Rates of Nonfatal Occupational Injuries and Illnesses by Industry. Find the table at [www.BLS.gov](http://www.BLS.gov) or obtain from your Program Coordinator.

Compare your rates to BLS: Calculate the percent above or below the BLS national average for your TCIR and DART rates using the formula: \([\frac{\text{Site rate} - \text{BLS rate}}{\text{BLS rate}}] \times 100\)

If your rates have increased since last year, you must identify and describe the contributing factors and corrective actions taken in the body of the evaluation of each related element and sub-element in Section D, below. If your 3-year rates are now above the national average, you must submit a rate reduction plan based on your findings. Contact your Program Coordinator to discuss the terms of your rate reduction plan.

**SECTION C: SIGNIFICANT CHANGES OR EVENTS**

Describe the impact of any significant changes (management, corporate buy-outs, etc.) and events (fatality, catastrophe, accident, complaints, etc.) and steps taken to ensure or restore employee safety and health.
SECTION D: NARRATIVE EVALUATION OF SAFETY AND HEALTH MANAGEMENT SYSTEM

In narrative form, assess the effectiveness of each of the four elements and their sub-elements in your safety and health management system. They are:

1. Management Leadership and Employee Involvement
   a. Management Commitment to Safety and Health Protection and to NV-VPP Participation
   b. Policy
   c. Goals, Objectives, and Planning
   d. Visible Top Management Leadership
   e. Responsibility and Authority
   f. Line Accountability
   g. Resources
   h. Employee Involvement
   i. Contract Employee Coverage
   j. Written Safety and Health Management System

2. Worksite Analysis
   a. Hazard Analysis of Routine Jobs, Tasks, and Processes
   b. Hazard Analysis of Significant Changes, New Processes, and Non-Routine Tasks- Including pre-use analysis and new baselines
   c. Routine Self-Inspections
   d. Hazard Reporting System for Employees
   e. Industrial Hygiene Program
   f. Investigation of Accidents and Near-Misses
   g. Trend/Pattern Analysis

3. Hazard Prevention and Control
   a. Certified Professional Resources
   b. Hazard Elimination and Control Methods
      • Engineering Controls
      • Administrative Controls
      • Work Practice Controls and Hazard Control Programs
      • Safety and Health Rules and Disciplinary System
      • Personal Protective Equipment
   c. Process Safety Management (if applicable)
   d. Occupational Health Care Program
   e. Preventive/Predictive Maintenance
   f. Tracking of Hazard Correction
   g. Emergency Preparedness

4. Safety and Health Training
   a. Managers
   b. Supervisors
   c. Employees
   d. Emergencies
   e. PPE
For each sub-element, include a description of:
- Improvements made since the previous year and completion of the previous year's recommendations.
- Any deficiencies identified, recommendations for improvement, the person(s) responsible for fulfilling each new recommendation, target dates for their completion, and the data/information reviewed to assess the effectiveness of the sub-element.

SECTION E: SUMMARY CHART OF 1-YEAR CONDITIONAL GOALS

Please fill in the table below, using as many rows as necessary to summarize all of the goals currently awaiting completion of implementation, either from the previous year or the current year.

<table>
<thead>
<tr>
<th>Goal</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Goal 1:</td>
<td></td>
</tr>
<tr>
<td>Goal 2:</td>
<td></td>
</tr>
<tr>
<td>Goal 3:</td>
<td></td>
</tr>
</tbody>
</table>

SECTION F: SUCCESS STORIES

Please describe any success stories related to the implementation of NV-VPP requirements. Include anecdotal as well as statistical evidence of improvements, non-routine safety and health activities, outreach, etc.
APPENDIX C

ONSITE EVALUATION REPORT FORMAT

NV-VPP SITE REPORT

Recommending
STAR APPROVAL

For

Company Name
City, State

Month X, 20xx

Report Date
Month X, 20xx

Evaluation Team
Name, Team Leader
Name, Backup Team Leader
Name, Safety Specialist
Name, Hygienist
Name, SGE
I. PURPOSE AND SCOPE OF REVIEW

- Name
- Location
- Date of evaluation
- Purpose of evaluation (Star approval, Demo approval)
- NV-VPP Team Members
- NV-VPP Volunteers

II. METHODS OF DATA COLLECTION - Information on which report is based (application, previous reports, walkthrough, on site documentation, etc.)

III. EMPLOYEES AT THE WORKSITE

- Number of employees
- Contract employees and/or temporary employees
- Collective bargaining agent(s) representing the employees
- Number of interviews conducted with different types of employees

IV. THE WORKSITE

- NAICS and SIC Codes
- Description (one location or many, acreage, age, primary structures, etc.)
- Basic description of processes, products, and applications
- Housekeeping

V. WORKSITE HAZARDS

- Site hazards
- Covered under Process Safety Management
- Provide a brief description of how the questions from the PSM application supplement, and PSM Questionnaire, were asked and verified.

VI. INJURY AND ILLNESS RATES

- Rates - TCIR, DART
- Comparisons to BLS industry averages

VII. DISTRICT OFFICE ACTIVITY

- Prior NVOSHA inspection activity
- Relationship with NVOSHA

VIII. ELEMENTS OF THE NV-VPP REVIEW/PROGRAM CHANGES

- Bulleted summary of NV-VPP Elements with a reminder that all aspects of the Safety and Health program meet the NV-VPP requirements as set forth in this manual (Refer to the NV-VPP Site Worksheet for specifics).
- Management, Leadership, and Employee Involvement
- Worksite Analysis
- Hazard Prevention and Control
- Safety & Health Training
- For Reapproval evaluations, discuss significant program or site changes since the last visit. A bulleted list is acceptable.
IX. AREAS OF EXCELLENCE - Bulleted list and description of best practices (e.g., machine guarding, ergonomics, lockout/tagout, employee involvement)

X. RECOMMENDATION FOR PARTICIPATION - Recommendation

XI. GOALS

- 1-Year Conditional goals (if relevant)

A review of the OSHA 300 logs was made. The following are the total incidence and lost workday case rates since 20XX:

<table>
<thead>
<tr>
<th>Year</th>
<th>Hours</th>
<th>Total # of Cases</th>
<th>TCIR</th>
<th>Number of Cases Involving Days Away from Work, Restricted Activity or Job Transfer</th>
<th>DART Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>20xx</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>20xx</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>20xx</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

For the period 20xx-20xx, the site’s:

- Total Case Incidence Rate (TCIR) is X.X (XX% above/below the 20xx BLS industry averages for NAICS XXXXXX).
- The Days Away from Work, Restricted Activity, or Job Transfer (DART) case incidence rate is X.X (XX% above/below the 20xx BLS industry averages for NAICS XXXXXX).

The information on the OSHA 300 Logs supports the information provided in the application, and the company’s first report of injury forms support the data in the logs. The [Company, Position Title] is responsible for the entries to the OSHA 300 Log and verified the accuracy of the records. The [Position Title] understands the recordkeeping requirements. Based upon interviews conducted with management and employees, the logs accurately reflect the injury and illness experience at this plant.

There [were/were not] temporary employees at the worksite at the time of the team’s visit. Injuries or illnesses experienced by temporary employees under the direct supervision of [Company] are recorded on the worksite’s OSHA 300 Log. There were X temporary employee injuries recorded on the worksite’s OSHA 300 Log for 20xx.

### A. Written Safety & Health Management System

A1. Are all the elements (such as Management Leadership and Employee Involvement, Worksite Analysis, Hazard Prevention and Control, and Safety and Health Training) and sub-elements of a basic safety and health management system part of a signed, written document? If not, explain.

A2. Have all NV-VPP elements and sub-elements been in place at least 1 year? If not, please identify those elements that have not been in place for at least 1 year.

A3. Is the written safety and health management system at least minimally effective to address the scope and complexity of the hazards at the site? (Smaller, less complex sites require a less complex system.) If not, explain.

A4. Have any NV-VPP documentation requirements been waived (as per FRN page 656, paragraph F5a4)? If so, explain.

### B. Management Commitment & Leadership

B1. Does management overall demonstrate at least minimally effective, visible leadership with respect to the safety and health program (considering FRN items F5 A-H)? Provide examples.

B2. How has the site communicated established policies and results-oriented goals and objectives for employee safety to employees?

B3. Do employees understand the goals and objectives for the safety and health program?

B4. Are the safety and health program goals and objectives meaningful and attainable? Provide examples supporting the meaningfulness and attainability (or lack there of if answer is no) of the goal(s). (Attainability can either be unrealistic/realistic goals or poor/good implementation to achieve them.) (See: TED Chapter 3 II C1a)

B5. How does the site measure its progress towards the safety and health program goals and objectives? Provide examples.
## APPENDIX C

### SECTION I: MANAGEMENT LEADERSHIP & EMPLOYEE INVOLVEMENT

<table>
<thead>
<tr>

</tr>
</thead>
</table>

**C. Planning**

C1. How does the site integrate planning for safety and health with its overall management planning process (for example, budget development, resource allocation, or training)?

C2. Is safety and health effectively integrated into the site’s overall management planning process? If not, explain.

**D. Authority and Line Accountability**

D1. Does top management accept ultimate responsibility for safety and health in the organization? (Top management acknowledges ultimate responsibility even if some safety and health functions are delegated to others.) If not, explain.

D2. How is the assignment of authority and responsibility documented and communicated (for example, organization charts, and job descriptions)?

D3. Do the individuals assigned responsibility for safety and health have the authority to ensure that hazards are corrected or necessary changes to the safety and health management system are made? If not, explain.

D4. How are managers, supervisors, and employees held accountable for meeting their responsibilities for workplace safety and health? (Annual performance evaluations for managers and supervisors are required.)

D5. Are adequate resources (equipment, budget, or experts) dedicated to ensuring workplace safety and health? Provide examples.

D6. Is access to experts (for example, Certified Industrial Hygienists, Certified Safety Professionals, Occupational Nurses, or Engineers), reasonably available to the site, based upon the nature, conditions, complexity, and hazards of the site? If so, under what arrangements, and how often are they used?

**E. Contract Employees**

E1. Does the site utilize contractors? Explain.

E2. Were there contractors onsite at the time of the evaluation?
<table>
<thead>
<tr>
<th>E3. When selecting onsite contractors, how does the site evaluate the contractor’s safety and health programs and performance (including rates)? (See: TED Chapter 3 IV 3-19)</th>
<th>Yes or No</th>

<th>Observation</th>
<th>Doc Review</th>
</tr>
</thead>
<tbody>
<tr>
<td>E4. Are contractors and subcontractors at the site to maintain effective safety and health programs and to comply with all applicable NVOSHA, OSHA and company safety and health rules and regulations? If so, provide examples.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>E5. Does the site’s contractor program cover the prompt correction and control of hazards in the event that the contractor fails to correct or control such hazards? Provide examples.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>E6. How does the site document and communicate oversight, coordination, and enforcement of safety and health expectations to contractors?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>E7. Have the contract provisions specifying penalties for safety and health issues been enforced, when appropriate? If not, explain.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>E8. How does the site monitor the quality of the safety and health protection of its contract employees?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>E9. If the contractors’ injury and illness rates are above the average for their industries, does the site have procedures that ensure that all employees are provided effective protection on the worksite? If not, explain.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>E10. Do contract provisions for contractors require the periodic review and analysis of injury and illness data? Provide examples.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>E11. Based on your answers to the above items, is the contract oversight minimally effective for the nature of the site? (Inadequate oversight is indicated by significant hazards created by the contractor, employees exposed to hazards, or a lack of host audits.) If not, explain.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>F. Employee Involvement</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>

<tr>
<td>A1. Does the site select at least minimally effective controls to prevent exposing employees to hazards?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A2. When the site selects hazard controls, does it follow the preferred hierarchy (engineering controls, administrative controls, work practice controls [e.g., lockout/tagout, bloodborne pathogens, and confined space programs], and personal protective equipment) to eliminate or control hazards? Please provide examples, such as how exposures to health hazards were controlled.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A3. Describe any administrative controls used at the site to limit employee exposure to hazards (for example, job rotation).</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A4. Do the work practice controls and administrative controls adequately address those hazards not covered by engineering or administrative controls? If not, explain.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A5. Are the work practice controls (e.g., lockout/tagout, bloodborne pathogens, and confined space programs) recommended by hazard analyses implemented at the site? If not, explain.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A6. Are follow-up studies (where appropriate) conducted to ensure that hazard controls were adequate? If not, explain.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A7. Are hazard controls documented and addressed in appropriate procedures, safety and health rules, inspections, training, etc.? Provide examples.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A8. Are there written employee safety procedures including a disciplinary system? Describe the disciplinary system.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A9. Has the disciplinary system been enforced equally for both management and employees, when appropriate? If not, explain</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A10. Does the site have minimally effective written procedures for emergencies (TED 3-16 3h)?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A11. Are emergency drills held at least annually?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### SECTION III: HAZARD PREVENTION AND CONTROL

| A12. | Does the site have a written preventative/predictive maintenance system? If not, explain. |
| A13. | Did the hazard identification and analysis (including manufacturers’ recommendations) identify hazards that could result if equipment is not maintained properly? If not, explain. |
| A14. | Does the preventive maintenance system adequately detect hazardous failures before they occur? If not, explain. |
| A15. | How does the site select Personal Protective Equipment (PPE)? |
| A16. | Do employees understand the limitations and uses of PPE? If not, explain. |
| A17. | Did the team observe employees using, storing, and maintaining PPE properly? If not, explain. |
| A18. | Is the site covered by the Process Safety Management standard (29 CFR 1910.119)? If yes, please answer questions A19-A21 below. Additionally, please complete either onsite evaluation supplement A or B, or onsite evaluation supplement C. If not, skip to section B. |
| A19. | Which chemicals that trigger the Process Safety Management (PSM) standard are present? |
| A20. | Which process(es) were followed from beginning to end and used to verify answers to the questions asked in the PSM application supplement, and the PSM Questionnaire? |
| A21. | Verify that contractor employees who perform maintenance, repair, turnaround, major renovation or specialty work on or adjacent to a covered process have received adequate training and demonstrate appropriate knowledge of hazards associated with PSM, such as non-routine tasks, process hazards, hot work, emergency evacuation procedures, etc.? Explain. |
### SECTION III: HAZARD PREVENTION AND CONTROL

#### B. Occupational Health Care Program and Recordkeeping

<table>
<thead>
<tr>
<th>B1. Describe the occupational health care program (including availability of physician services, first aid, and CPR/AED) and special programs such as audiograms or other medical tests used.</th>
</tr>

INTRODUCTION

1.1 THE ORIGINAL NV-VPP REPORT IS NOW DIVIDED INTO TWO SEPARATE SECTIONS:

- The NV-VPP Site Worksheet is a worksheet to be used onsite by the evaluation team to document their findings. The purpose of the NV-VPP Site Worksheet is to provide the technical basis and rationale that support an evaluation team’s findings and the resulting program participation recommendation.

- The VPP Site Report is a summary of the findings and recommendations from the VPP on-site evaluation and is to be used by the Program Coordinator and the CAO to review the team’s findings and recommendations. The NV-VPP Site Report is designed to reflect the overall findings from the evaluation in a short and concise narrative format. The Site Report contains a summary of the evaluation, documentation of the site’s injury and illness experience, and recommendation for program participation.

The NV-VPP Site Worksheet and NV-VPP Site Report replace the previous long-form narrative report. The major changes include:

- Streamlining the NV-VPP Site Worksheet to enable yes/no answers to many of the questions and use of bullet points to document findings, rather than lengthy explanations.

- Replacement of the narrative report with a brief section that describes key program elements and the site evaluation team’s recommendations.

Both the NV-VPP Site Worksheet and the NV-VPP Site Report are to be maintained in the site’s public file and presented to the employer.

1.2 TECHNICAL REQUIREMENTS - NV-VPP on-site evaluation teams are required to complete the NV-VPP Site Report and Worksheet using a laptop computer. The minimum technical specifications required to operate these programs effectively are:

- A Pentium III or equivalent CPU running at 600 MHz speed or faster (many are 900+)

- At least 256 MB RAM (Random Access Memory)

- At least a 10 GB hard drive

- Microsoft Word

- Access to e-mail from a remote location.

In addition, on-site evaluation teams should have access to a cellular (mobile) phone. Additional items that evaluators have found to be useful, but not considered essential, include:

- Computer projector (for example, InFocus LP 130)

- Personal Desk Assistant for scheduling and outreach/contact information.

- Digital camera with the capability to load photos easily onto a computer. (Note: This is often requested so that evaluators can provide pictures of success stories. However, if
photos are to be published, the camera must be capable of high-resolution shots, with a minimum 300 dpi at 5x7 inches or larger.

* * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * *
The following pages contain detailed instructions for completing the revised NV-VPP Site Worksheet and the NV-VPP Site Report.

**NV-VPP SITE WORKSHEET**

**Section 2**

The NV-VPP Site Worksheet requires evaluators to review the key topic areas related to a site’s safety and health management system and its working conditions.

The NV-VPP Site Worksheet has four major sections devoted to the following topics:

- SECTION I – MANAGEMENT LEADERSHIP AND EMPLOYEE INVOLVEMENT
- SECTION II – WORKSITE ANALYSIS
- SECTION III – HAZARD PREVENTION & CONTROL
- SECTION IV – SAFETY AND HEALTH TRAINING.

At the end of each major section, an additional page has been included to enable evaluators to provide further information and discussion on such topics as 90-Day Items, Best Practices, Recommendations, and Documents Referenced.

The NV-VPP Site Worksheet’s modular format allows evaluators to further break up the document to facilitate the on-site evaluation and reporting of findings. Key sections contain several subsections of questions that address various aspects of the general topic. Each subsection is clearly identified and given a letter and a number to facilitate easy reference by the on-site evaluators. For example, Section I, Management Leadership and Employment Involvement, consists of the following six subsections:

- SUBSECTION A – WRITTEN SAFETY AND HEALTH MANAGEMENT SYSTEM
- SUBSECTION B – MANAGEMENT COMMITMENT AND LEADERSHIP
- SUBSECTION C – PLANNING
- SUBSECTION D – AUTHORITY AND LINE ACCOUNTABILITY
- SUBSECTION E – CONTRACT EMPLOYEES
- SUBSECTION F – EMPLOYEE INVOLVEMENT

Evaluators should be consistent in their use of the format when addressing the questions in each of the four topic sections. Please remember:

- Evaluators are required to complete *all* questions.
Some of the questions will instruct evaluators to support their yes/no answers or explain why they believe that site performance in a particular area is adequate. **It is important that evaluators answer the entire question.**

Although evaluators are not required to provide comments for “yes” answers, they may wish to do so in order to highlight best business practices or document a unique or meaningful application that might benefit another site.

## 2.1 INSTRUCTIONS FOR COMPLETING THE VPP SITE WORKSHEET

<table>
<thead>
<tr>
<th>Section I: Management Leadership &amp; Employee Involvement</th>
<th>How Assessed</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Written Safety &amp; Health Management System</td>
<td>Yes or No</td>
</tr>
<tr>
<td>A1. Are all the elements (such as Management Leadership and Employee Involvement, Worksite Analysis, Hazard Prevention and Control, and Safety and Health Training) and sub-elements of a basic safety and health management system part of a signed, written document? If not, explain.</td>
<td></td>
</tr>
<tr>
<td>A2. Have all VPP elements and sub-elements been in place at least 1 year? If not, please identify those elements that have not been in place for at least 1 year.</td>
<td></td>
</tr>
<tr>
<td>A3. Is the written safety and health management system at least minimally effective to address the scope and complexity of the hazards at the site? (Smaller, less complex sites require a less complex system.) If not, please explain.</td>
<td></td>
</tr>
<tr>
<td>A4. Have any VPP documentation requirements been waived? If so, please explain.</td>
<td></td>
</tr>
</tbody>
</table>

**To complete these subsections, evaluators should follow the steps listed below.**

1. Read the question and answer “Yes” or “No” in the first column based upon the findings from the evaluation.
2. If the question asks you to explain your “Yes” or “No” answer, please respond in bullet-point format.
3. If the Yes or No column is shaded, then the evaluator is required to provide a detailed answer to the question. Please present your analysis in bullet-point format.
4. In the section entitled “How Assessed,” identify the source(s) of information used to answer the question. If you:
   - Used information obtained during interviews, put an X in the **Interview** column.
   - Used personal observation, put an X in the **Observation** column.
   - Reviewed documents, put an X in the **Doc Review** column. Evaluators must identify the documents reviewed.
There are various ways to identify the documents reviewed. One is to assign numbers to all of the documents reviewed in connection with a particular section of the NV-VPP Site Worksheet. When you use a document to answer a question, put the number assigned to that document in the “Doc Review” column. For example, if you used an employee manual to answer a question, and you had identified the employee manual as Document 1, you would put a “1” in the “Doc Review” column. Then, at the end of the section, you would list the number and the title of each document in the Documents Referenced box. Another potential method is to list the documents reviewed in the bulleted area below the question. Either method is acceptable.

Once the evaluators have completed the six subsections, they must complete the summary and recommendations section, as described below.

2.2 INSTRUCTIONS FOR COMPLETING THE SUMMARY AND RECOMMENDATIONS SECTION

At the end of each section, there is a summary and recommendations section. Instructions for its completion are presented below.

<table>
<thead>
<tr>
<th>SECTION I: MANAGEMENT LEADERSHIP &amp; EMPLOYEE INVOLVEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>90-Day Items</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>Best Practices</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>Comments including Recommendations (optional)</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>Documents Referenced (as appropriate)</td>
</tr>
</tbody>
</table>

1. The 90-Day Items section should be used to document those actions that the site needs to take before NV-VPP can approve the site into the program. 90-Day Items should be limited to (a) compliance issues and (b) program element modifications that can be easily accomplished and that do not involve the “year-in-practice” requirement. Sites must demonstrate that they have addressed the items listed here within a 90-day period starting from the conclusion of the on-site visit.

2. The Site Evaluation Team can use the optional “Best Practices” box at the end of each Worksheet Section to recognize (and thus praise) one or more aspects of the site’s safety and health management system where the site is performing particularly well.

3. The Comments including Recommendations section, which is optional, provides evaluators the opportunity to document additional comments about the site’s safety and health management system. Recommendations should be made in those areas where the
site’s element is already at Star quality, but still has room for improvement. An appropriate recommendation is one that helps improve the element’s reliability, effectiveness, or efficiency.

4. In the **Documents Referenced** section, evaluators must list the documents that were reviewed in addressing the elements of this section.

Team members and the Team Leader must ensure that goals, items, comments, or recommendations provided at the end of a Worksheet Area do not contradict any of the Site Evaluation Worksheet answers. For example, if the Worksheet has a question that has been answered “Yes” without further explanation, but the goals, items, comments, or recommendations indicate that the answer should have been “No” with an explanation, the inconsistency should be resolved to make the Site Evaluation Worksheet as accurate as possible.

2.3 **WORKING WITH THE NV-VPP SITE WORKSHEET COMPUTER FILES** – The following are summaries of the best worksheet practices.

2.3.1 **DIVIDING THE VPP SITE WORKSHEET FILES AMONG TEAM MEMBERS**

One of the best practices used by evaluators was to split the worksheet files and divide responsibility for their completion among team members. The method used to do this is described below.

To reduce the size of the NV-VPP Site Worksheet computer file, increase the ease of its use, and reduce potential computer malfunctions, the VPP Site Worksheet has been broken into a series of folders and files. Each area has a folder. Each section of the Worksheet has been saved as a unique file within the appropriate area folder. For example, Section I, Subsection A, and Section I, Subsection B are saved as two separate and distinct files. Both files are saved in the Section I folder. In addition to the area folders, there is a folder that contains the entire Worksheet in one big file.

To successfully work with these files, on-site evaluators should use the following procedures to divide responsibilities for completion of the NV-VPP Site Worksheet:

1) The Team Leader should give all team members either a disk containing the full NV-VPP Site Evaluation Worksheet if they will be able to complete the Worksheet on their own computers, or a hard (paper) copy of their assigned sections if computer resources are insufficient.

2) Before individual team members separate to conduct the evaluation, the entire team should meet and briefly review their assignments. This is to ensure that all team members understand which sections they are responsible for, and what information is needed to complete their assigned portion of the Worksheet.

3) When working with the files on the computer, team members should complete only their assigned sections. They should save their work under a different file name, such as “Section I-B, Company XYZ, Billings, MT,” to prevent its being mixed up with the original document. This can be done by using the “Save as” function under the “File” menu on the word processing software. Change the name of the file in the “File name” window that appears. If two team members are assigned to different sections of the same file, both should answer only their questions and then save their work with their own
unique titles. The team leader will be able to open both files to copy and paste the information together as necessary (see instructions below for copying and pasting information).

**2.3.2 COMPILING THE FINAL NV-VPP SITE EVALUATION WORKSHEET**

The following are suggestions for compiling the NV-VPP Site Worksheet sections into the final Worksheet.

1) The Team Leader should get the disk or hardcopy back from each team member after the site evaluation. Working alone to minimize group work (and thus person hours), the Team Leader should consolidate the different sections of the worksheet into a single document. To do this:

Open a blank MS Word document. Set the margins so that top and bottom are 1” and left and right are .5”.

Insert the File titled “Cover Pages.” To insert a file:

Put the cursor where you want to insert the file (in this case, at the top of the document).

Click on the Insert menu at the top of the document.

Click on File (to see this option you may have to expand the menu by clicking on the arrows at the bottom).

A browser window will appear. Use the browser to find the file you want to insert from its current location (in this case, most likely the DVD/CD-RW drive, or the C-drive if the file is already on the hard drive).

Double click on the file you want to insert.

Make all necessary changes to the cover pages of the NV-VPP Site Worksheet.

Repeat the steps involved for inserting a file for all of the additional tables gathered from the disks received from each team member.

Save the final document (you should also save as you go!).

2) Since each team member may make additions to the “Additional Comments” file, the Team Leader should be prepared to copy and paste modifications in order to include all comments in the final report. To copy and paste sections of the document:

Highlight the section of the document you would like to copy. For sections of tables, highlight all the relevant cells or text, being sure to include the cells on the far right of the table, if necessary. If pasting into a blank document, be sure to set the margins for the top and bottom at 1” and the left and right margins at .5”. This will ensure that the formatting remains consistent between the documents.

After highlighting a section, click on the Copy icon on the tool bar, or click on Copy under the Edit menu. If Copy is not given as a choice immediately, you may need to click on the extended-menu button (the double arrows at the bottom of the menu) to find it.

Place the cursor where you would like the information pasted. Click on the paste icon from the tool menu, or click on Paste from the Edit menu.
2.3.3 SINGLE FILE VERSION

Team Leaders who do not wish to utilize the multiple file method may use a single file version. We do not recommend cutting and pasting the tables in this version. You are more likely to be successful if you keep just one master file and have team members take turns filling out their assigned sections on the master file.

NV-VPP VPP SITE REPORT

Section 3

3. NV-VPP SITE REPORT - The purpose of the NV-VPP VPP Site Report is to provide the reviewers with a brief summary of the evaluators’ findings upon completion of the site visit. The NV-VPP Site Report is to be prepared after the NV-VPP Site Worksheet has been completed.

The NV-VPP Site Report addresses ten basic topics and two conditional areas:

- Purpose and Scope of Review
- Method of Data Collection
- Employees at the Worksite
- The Worksite/Program Changes (for Re-Approvals)
- Worksite Hazards
- Injury and Illness Rates
- District Office Enforcement Activity
- Elements of NV-VPP Review
- Areas of Excellence (if applicable)
- Recommendation
- OSHA Log Recordkeeping

An example of a completed NV-VPP Site Report is located at the end of this section.

3.1 PREPARING THE NV-VPP SITE REPORT - To complete the NV-VPP Site report, evaluators should follow the steps listed below.

1. First compile the information (from the NV-VPP Site Worksheet) required for completion of the NV-VPP Site Report.

2. Once this information has been gathered and documented in the NV-VPP Site Worksheet, present the information in paragraph form, as illustrated in the NV-VPP Site Report Example in Section 3.3 below. Use the NV-VPP Site Report Example as a model for developing a complete report.

3.2 OSHA LOG RECORDKEEPING - Evaluators must review the NV-VPP site’s OSHA injury and illness logs as part of a complete on-site visit and include this analysis in the NV-VPP
Site Report. To ensure that the OSHA injury and illness logs are thoroughly reviewed, evaluators must address the following issues:

- Prepare the Total Case Incidence Rate (TCIR) and Days Away from Work, Restricted, and Transferred (DART) activity case incidence rate calculation table.
- Analyze the TCIR and DART rates.
- Compare the data contained in the site’s OSHA injury and illness logs with the data presented in the site’s VPP application.

The requirements for preparing each of these analyses are described below.

### 3.2.1 TCIR AND DART RATE CALCULATION TABLE

- Based on a review of the site’s OSHA injury and illness logs, evaluators should first complete the TCIR and DART rate table. An example follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Hours</th>
<th>Total # of Cases</th>
<th>TCIR</th>
<th>Number of Cases Involving Days Away from Work, Restricted Activity or Job Transfer</th>
<th>DART Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>1999</td>
<td>185,445</td>
<td>2</td>
<td>2.2</td>
<td>2</td>
<td>2.2</td>
</tr>

### 3.2.2 ANALYSIS OF THE TCIR AND DART RATES

- In this section, site evaluators should present the site’s TCIR and DART rates and the percentage above or below the BLS National Average for the appropriate NAICS code. The analysis of the TCIR and DART rates in the above example should be presented as follows:
  - The Total Case Incidence Rate (TCIR) is 2.3 (73% below the 2001 BLS industry average for NAICS 429100).
  - The Days Away from Work, Restricted Activity, and Job Transfer (DART) Case Incidence Rate is 1.7 (60% below the 2001 BLS industry average for NAICS 429100).

### 3.2.3 COMPARISON OF OSHA INJURY AND ILLNESS Logs TO SITE’S NV-VPP APPLICATION

- Compare the site’s OSHA injury and illness logs to the site’s NV-VPP application to determine whether the logs accurately reflect the injury and illness experience at the site. Also, identify the individual responsible for maintaining the OSHA injury and illness log and verify that this individual understands OSHA’s recordkeeping requirements.

### 3.2.4 TEMPORARY EMPLOYEES

- To fully evaluate the injury and illness experience of temporary employees at the worksite, include the following information:
  - Whether temporary employees were at the worksite at the time of the site visit.
Whether injuries or illnesses experienced by temporary employees under the
direct supervision of the site were recorded on the site’s OSHA injury and illness
log.

The number of temporary employee injuries recorded on the OSHA injury and
illness log for the current year.

Review applicable contractor injury and illness data and make a judgment about whether the
contractors at the site are experiencing the same quality level of safety and health protection as
regular employees, and/or whether the site is transferring hazardous activities to applicable
contractors in order to “hide” the hazards.

3.3 NV-VPP Site Report Example - The following is an example of the NV-VPP Site Report.
Note that this example does not include the required analysis of the OSHA logs.

EXAMPLE:

1. PURPOSE AND SCOPE OF REVIEW - A NV-VPP onsite evaluation recommending Star
 approval was conducted at Infinitium USA, L.P., Linden Technical Center, Las Vegas, NV
from February 8 through February 10, 2002. The NVOSHA VPP Review Team (Team)
consisted of: Tom Jones, Team Leader; Jim Jones, Industrial Hygienist; Mary Jones, Safety
Specialist; Lisa Jones, Ph.D., a Chemical Engineering Specialist; and Michael Jones, NV-
VPP SGE.

2. DATA COLLECTION METHODS - The information for this report was obtained from the
site’s NV-VPP application; documentation reviewed on-site, interviews with employees, and
a walkthrough of the plant. All areas of the plant were covered in at least one walkthrough.

3. EMPLOYEES AT THE WORKSITE - There are 254 employees currently working on-
site. In addition, 76 contractor employees are located onsite performing maintenance
functions, implementing capital improvements, providing guard services, and staffing the
cafeteria. The collective bargaining agents representing the employees’ onsite are the
Independent Laboratory Employees Union, Inc. and the United Cafeteria Workers of
America. Formal interviews were conducted with 20 employees and 10 contractors. In
addition, informal interviews were conducted with 30 employees and 9 contractors.

4. THE WORKSITE OR PROGRAM CHANGES (FOR RE-APPROVALS) - The site is
properly classified under the Standard Industrial Classification (SIC) code 2860 for industrial
organic chemicals – not elsewhere classified. The site is a corporate research and
development center built in 1998. It consists of four buildings: an office complex, a
maintenance building, a blending operation, and a pilot plant. The buildings are spread
across 75 acres. Non-hazardous organic chemicals are combined in the blending plant to
produce a saline solution for use with contact lenses. The pilot plant bottles and packages
this solution for shipping. The site is not covered under OSHA’s Process Safety
Management (PSM) standard.

5. WORKSITE HAZARDS - The hazards located on this site are skin irritant chemicals;
confined space hazards for the storeroom areas; uncontrolled hazardous energy sources from
maintenance conveyors; sanitation process hazards, including exposure to sanitation
chemicals; elevated noise levels; and material handling hazards, such as truck operations and extensive conveyers.

6. **INJURY AND ILLNESS RATES** - The three-year Total Case Incidence Rate (TCIR) and Days Away from Work, Restricted Activity, or Job Transfer (DART) case incidence rate for the period (1996-1999) are 0.3 and 0.1, respectively. The site TCIR is 92 percent below, and the DART rate is 94 percent below the 2001 BLS national industry average for SIC 2860.

7. **DISTRICT OFFICE ENFORCEMENT ACTIVITY** - There has been no District Office enforcement inspection activity at the site in any of the last three years. The site has a positive relationship with the local District office. The site contacted the CAO Office regarding participation in the NV-VPP program.

8. **ELEMENTS OF NV-VPP REVIEW** - The NV-VPP Review team examined each of the required elements of the site’s safety and health management system and, in accordance with their application, found them to be consistent with the high quality of NV-VPP programs. The site meets all NV-VPP requirements and all NVOSHA and OSHA standards are appropriately covered. For specifics on the individual site program elements, consult the NV-VPP Site Worksheet.

9. **AREAS OF EXCELLENCE (IF APPLICABLE)** - There are two program elements of this site that are exemplary and could be used as models for other sites in the same industry. These are:

   - **TREND ANALYSIS** – The use of a safety and health database has resulted in trend analysis above and beyond what most sites in this industry address. They are able to pinpoint not only basic trends, but also potential interactive trends (particular locations and time of day, particular supervisors with a given piece of equipment on a particular shift) and have used this ability to target training, discipline, and corrective actions.

   - **MACHINE GUARDING** – The machine guarding for the site is excellent. The guarding for the 200 Ton Press is particularly good. Such presses are difficult to guard effectively, but this site has found a rail, shield, and control panel system that is very effective.

10. **RECOMMENDATION FOR PARTICIPATION** - The NV-VPP Review Team recommends participation of the Infinitium USA, L.P., Linden Technology Center, Las Vegas, NV, in the NV-VPP Star Program.
APPENDIX E

RECOMMENDED INTERVIEW QUESTIONS

I. PURPOSE - Interviews are an important tool in assessing the effectiveness of a site’s safety and health programming. These questions are intended to guide the NV-VPP reviewer during oral employee interviews. To begin, explain the purpose of the interview and the reason for NV-VPP’s presence at the site. Make employees aware that interviews are kept confidential and that the employee’s responses will not in themselves determine company approval or disapproval.

II. GENERAL EMPLOYEE INTERVIEW QUESTIONS

A. How long have you worked here?
B. Tell me about your job. What do you do during a typical day?
C. What are the safety and health hazards of your job?
D. How do you protect yourself from those hazards? What kind of personal protective equipment do you wear? Were you provided training?
E. What type of safety and health training have you received?
F. What happens if management disobeys a company safety rule? If an employee disobeys?
G. How do you respond in the event of a fire, hazardous waste spill, alarm, or medical emergency?
H. What does NV-VPP mean to you?
I. What is one method of reporting a safety or health concern? What was the last unsafe practice you reported and/or corrected?
J. How do your supervisors demonstrate their involvement in safety and health?
K. Have you ever seen anyone testing the air, noise levels, or conducting other surveys for possible health hazards? Do you know what the results were or what they meant?
L. Have you or anyone you know ever been injured or experienced a job-related illness? What is the procedure when someone is injured?
M. How are you involved in the safety decision-making process?
N. Is safety and health valued in your organization?
O. What is one objective in your department’s safety program?
P. How does management support your involvement in safety?
Q. What are your rights under Nevada OSHA?
R. Is there anything else you think we should know about the safety and health program here?

III. SUPERVISORS

A. How long have you worked here? When did you become a supervisor?
B. What do you see as your role in safety and health?
C. To what kinds of hazards are you and/or your employees exposed?
D. Has the company’s upper management provided adequate resources for safety and health programming, such as funding, time, and technical support?

E. What do you do when you discover a hazard in your area?

F. What do you do when an employee reports a hazard in your area?

G. Do you provide employee training in safety-related topics? (If so, please describe.)

H. Please give some examples where you had to use the disciplinary system for infractions of safety and health rules.

I. When was the last emergency drill? What is your role in drills?

J. How are you held accountable for ensuring safe and healthful working conditions in your area?

K. At high hazard chemical plants only: Is maintenance satisfactory, particularly on release prevention equipment? Is there adequate supervision provided for work performed on all shifts?

L. Do you have contract employees working in your area? If so, how do you control and address safety or health hazards relating to or created by them?

M. Are there routine or unannounced inspections? Who participates?

IV. ADMINISTRATORS AND EXECUTIVES

A. How long have you been with (company)?

B. Describe the type of safety and health hazards at this site.

C. How does management ensure that employee exposure to those hazards is eliminated or controlled?

D. How do you demonstrate leadership in and commitment to safety and health?

E. What benefits will a NV-VPP partnership provide for your company?

F. What do you think are your facility’s best practices in safety and health?

G. How do you address the competing pressures of production and safety?

H. How do you hold your supervisors accountable for safety and health? Have you ever had to discipline a supervisor for not following the rules?

I. How are you held accountable for your safety and health responsibilities?

V. RECORDKEEPERS

A. Who is responsible for recordkeeping?

B. Is your site recordkeeping centralized? Is it computerized?

C. Do you have a completed Summary of Occupational Injuries and Illnesses for the last 3 calendar years? Do you have the supplemental documentation for each case entered on the log?

D. Which form do you use as the supplementary record: OSHA First Report of Injury, a State workers' compensation form, an insurer’s form, or other?
E. What is the process by which injury and illness information gets to the recordkeeper? After an injury or illness occurs, how long does it take to enter it on the log?

F. What type of reference material do you refer to for guidance on keeping illness and injury records?

G. Who decides whether or not a case is recordable?

H. How do you determine whether or not a case is work-related?

I. Do you record any cases on the OSHA forms that are not compensable under workers' compensation?

J. How do you distinguish between an injury and an illness? Between medical treatment and first aid?

K. When does a case involve lost workdays? What constitutes restricted work activity?

L. What is your process for monitoring applicable contractor logs?

M. How do you safeguard the confidentiality of medical records?

N. How do you assure that any work restrictions are applied appropriately?

O. How have you assured timely and clear communications with the health care professional?

VI. OCCUPATIONAL HEALTH CARE PROFESSIONALS

A. What are your qualifications and licenses?

B. What procedures are in place to ensure that health care services are delivered consistently and effectively?

C. What type of audit procedures do you use to compare your process with acceptable standards of practice and OSHA requirements?

D. Are employees provided timely access to services?

E. How do you assure that work restrictions or work removal are followed?

F. How are you made aware of the job hazards at this facility? Are you included in identification of workplace hazards, or development of restricted duty jobs, or other onsite issues?

G. What kinds of health surveillance programs are in place?

H. How do you communicate health surveillance data to employees and management to reduce future risk?

I. Explain how you evaluate the effectiveness of your occupational health care program.

VII. MAINTENANCE PERSONNEL

A. Is there a scheduled preventive maintenance program? How is it carried out?

B. Do maintenance personnel participate in safety functions?

C. Is there a priority system for safety/environmental related maintenance items? Is it being followed?
D. Does the preventive maintenance program include onsite vehicles, sprinkler systems, detection/alarm equipment, fire protection, and emergency equipment?

E. Do you have input concerning safety and ease of maintenance for new equipment and machinery purchases?

F. Do you have an inventory of spare parts critical to safety and environmental protection?

G. Are you trained in the control of hazardous energy and the proper use of locks and tags?

H. Is there a system in place to track requests for repairs?

I. What methods are used to monitor the condition of critical equipment?

J. What is the ratio of scheduled versus unscheduled maintenance work?

K. What has the trend regarding maintenance been like over the past few years?

L. At sites covered by Process Safety Management (PSM), please ask appropriate questions.

VIII. GENERAL QUESTIONS FOR ONSITE EVALUATIONS TO DETERMINE REAPPROVAL

A. Describe any changes in your job or in the handling of safety issues since the last NV-VPP onsite evaluation.

B. How familiar are you with NV-VPP? Has your awareness increased since the last visit?

C. Do you have any increased knowledge of your rights under the program, including your right to receive upon request results of self-inspections or accident investigations?

D. Do you feel that the NV-VPP partnership has had a positive impact on your job and your safety?

E. Have you noticed any changes in safety and health conditions here since the site’s approval in VPP?
